## SCHEDULE 6

### Minimum number of sampling points

#### PART 2

##### Group A pollutants: limit values for the protection of ecosystems or vegetation

3. The Table below sets out the minimum number of sampling points for fixed measurements to assess compliance with limit values for the protection of ecosystems or vegetation in zones other than agglomerations.

| <i>If maximum concentrations exceed the upper assessment threshold</i> | <i>If maximum concentrations are between the upper and lower assessment thresholds</i> |
|--|--|
| 1 station every 20,000 km <sup>2</sup>                                 | 1 station every 40,000 km <sup>2</sup>   |

4. In island zones, the number of sampling points for fixed measurement should be calculated taking into account the likely distribution patterns of ambient-air pollution and the potential exposure of ecosystems or vegetation.
