#### III. Health information

- I, the undersigned, certify that the animal(s) described above meet(s) the following requirements:
- (a) it/they come(s) from a country where the following diseases are compulsorily notifiable: African horse sickness, dourine, glanders, equine encephalomyelitis (of all types including VEE), infectious anaemia, vesicular stomatitis, rabies, anthrax;
- (b) it/they has/have been examined today and show(s) no clinical sign of disease (2);
- (c) it/they is/are not intended for slaughter under a national programme of infectious or contagious disease eradication;
- (d) during the 90 days immediately preceding the exportation (or since birth if less than 90 days old) it/they has/have been resident on holdings under veterinary supervision in the country of dispatch and 30 days prior to dispatch it/they has/have been isolated from equidae not of equivalent health status;
- (e) it/they come(s) from the territory or in cases of official regionalization according to Community legislation from a part of the territory of a third country in which:
- (i) Venezuelan equine encephalomyelitis has not occurred during the last two years;
  - (ii) dourine has not occurred during the last six months;
  - (iii) glanders has not occurred during the last six months;
  - (iv) either vesicular stomatitis has not occurred during the last six months (3);

or

**▶**(i) —

- (f) it/they do(es) not come from the territory or from a part of the territory of a third country considered, in accordance with Community legislation, as infected with African horse sickness and
  - either it/they was/were not vaccinated against African horse sickness (3),

or

- (g) it/they do(es) not come from a holding which was subject to prohibition for animal health reasons nor had contact with equidae from a holding which was subject to prohibition for animal health reasons:
  - during six months in the case of equine encephalomyelitis, beginning on the date on which the equidae suffering from the disease are slaughtered;
  - (ii) in the case of infectious anaemia, until the date on which the infected animals having been slaughtered, the remaining animals have shown a negative reaction to two Coggins tests carried out three months apart;
  - (iii) during six months in the case of vesicular stomatitis;
  - (iv) during one month from the last recorded case, in the case of rabies;
  - (v) during 15 days from the last recorded case, in the case of anthrax;

If all animals of species susceptible to the disease located on the holding have been slaughtered and the premises disinfected, the period of prohibition shall be 30 days, beginning on the day on which the animals were destroyed and the premises disinfected, except in the case of anthrax, where the period of prohibition is 15 days;

Changes to legislation: There are currently no known outstanding effects for the Commission Decision of 5 February 1993 on animal health conditions and veterinary certification for imports of equidae for slaughter (93/196/EEC) (repealed). (See end of Document for details)

- (h) to the best of my knowledge, it/they has/have not been in contact with equidae suffering from an infectious or contagious disease in the 15 days prior to this declaration;
- (i) to the best of my knowledge, it/they has/have received no thyreostatic, estrogenic, androgenic or gestagenic substances for fatting purposes;
- •" (i) a Coggins test for equine infectious anaemia (3),
  - (ii) in the case of Equidae which have resided in Iceland from birth, it is certified that Iceland is officially free of equine infectious anaemia(3). ◄
  - a complement fixation test for glanders at a dilution of 1 in 10 (5);
- IV. The animal(s) will be sent in a vehicle cleansed and disinfected in advance with a disinfectant officially recognized in the country of dispatch and designed in a way that droppings, litter or fodder cannot escape during transportation.

The following declaration signed by the owner or representative is part of the certificate.

V. The certificate is valid for 10 days. In the case of transport by ship the time is prolonged by the time of the voyage.

Date	Place	Stamp (*) and signature of the official veterinarian

#### III. Health information

- I, the undersigned, certify that the animal(s) described above meets the following requirements:
- (a) it/they come(s) from a country where the following diseases are compulsorily notifiable; African horse sickness, dourine, glanders, equine encephalomyelitis (of all types including VEE), infectious anaemia, vesicular stomatitis, rabies, anthrax;
- (b) it/they has/have been examined today and show(s) no clinical sign of disease (2);
- (c) it/they is/are not intended for slaughter under a national programme of infectious or contagious disease eradication;
- (d) during the last three months immediately preceding the exportation (or since birth if less than three months old) it/they has/have been resident on holdings under veterinary supervision in the country of dispatch and
  - either it/they come(s) from a country (1) listed in group A, B, C or D below (3) and has/have been isolated from equidae not of the same health status during 30 days prior to dispatch (4),

or

- it/they come(s) from a country (1) listed in Group E below (3) and has/have been in an approved isolation centre, protected from vector insects during 40 days prior to dispatch (4);
- (e) it/they come(s) from the territory or in cases of official regionalization according to Community legislation from a part of the territory of a third country in which:
  - (i) Venezuelan equine encephalomyelitis has not occurred during the last two years;
  - (ii) dourine has not occurred during the last six months;
  - (iii) glanders has not occurred during the last six months;
  - (iv) either vesicular stomatitis has not occurred during the last six months (4);

O

- it/they was/were tested on samples of blood taken within 10 days of export on ......... (5), by a virus neutralization test for vesicular stomatitis with negative result(s) at a dilution of 1 in 12 (4);
- (v) in the case, the above described consignment of equidae includes uncastrated male animals older 180 days, either equine viral arteritis has not been officially recorded during the last six months (4);

or

the uncastrated male animals were tested on blood samples taken within 21 days of export on ...
 (5) by virus neutralization test for equine viral arteritis with negative result at a dilution of 1 in 4 in each case (4);

01

aliquots of their entire semen taken within 21 days of export on ...(5) were tested by virus isolation test for equine viral arteritis with negative result in each case (4);

or

— the uncastrated male animals were vaccinated on ... (5) against equine viral arteritis under official veterinary supervision with a vaccine approved by the competent authority, according to the following programme for initial vaccination and have been re-vaccinated at regular intervals (4);

Programmes for initial vaccination against equine viral arteritis:

Instruction: Cross out vaccination programmes that do not apply to the animals described above.

Verify supporting certification on testing before vaccination, vaccination and re-vaccination.

Specify, where appropriate, the individual vaccination programme for identified animals

- (a) Vaccination was carried out on the day a blood sample was taken that subsequently proved negative in a virus neutralization test at a dilution of 1 in 4; or
- (b) Vaccination was carried out during a period of isolation of not more than 15 days under official veterinary supervision, commencing on the day of a blood sample was taken that was tested du-

Changes to legislation: There are currently no known outstanding effects for the Commission Decision of 5 February 1993 on animal health conditions and veterinary certification for imports of equidae for slaughter (93/196/EEC) (repealed). (See end of Document for details)

(f)	it/they do(es) not come from the territory or from a part of the territory of a third country	considered,
	in accordance with Community legislation, as infected with African horse sickness	

- either it/they was/were not vaccinated against African horse sickness (4)
  - or
- (g) it/they do(es) not come from a holding which was subject to prohibition for animal health reasons nor had contact with equidae from a holding which was subject to prohibition for animal health reasons:
  - during six months in the case of equine encephalomyelitis, beginning on the date on which the equidae suffering from the disease are slaughtered;
  - (ii) in the case of infectious anaemia, until the date on which, the infected animals having been slaughtered, the remaining animals have shown a negative reaction to two Coggins tests carried out three months apart;
  - (iii) during six months in the case of vesicular stomatitis;
  - (iv) during one month from the last recorded case, in the case of rabies;
  - (v) during 15 days from the last recorded case, in the case of anthrax.

If all the animals of species susceptible to the disease located on the holding have been slaughtered and the premises disinfected, the period of prohibition shall be 30 days, beginning on the day on which the animals were destroyed and the premises disinfected, except in the case of anthrax, where the period of prohibition is 15 days;

- (h) to the best of my knowledge, it/they has/have not been in contact with equidae suffering from an infectious or contagious disease in the 15 days prior to this declaration;
- (i) to the best of my knowledge, it/they has/have received no thyreostatic, estrogenic, androgenic or gestagenic substances for fattening purposes;
- ▶<sup>(1)</sup> (i) a Coggins test for equine infectious anaemia (4),
  - (ii) in the case of Equidae which have resided in Iceland from birth, it is certified that Iceland is officially free of equine infectious anaemia (4). ◄
  - a complement fixation test for glanders at a dilution of 1 in 10, (6)
  - a complement fixation test for dourine at a dilution of 1 in 10; (6)

**▶**(1)\_\_\_\_\_

- - reactions if it/they has/have not been vaccinated (4),

or

- without increase in antibody count if it/they has/have been vaccinated (4);
- (l) either it/they was/were not vaccinated against Venezulelan equine encephalomyelitis (4) (8)

- IV. The animal(s) will be sent in a vehicle cleansed and disinfected in advance with a disinfectant officially recognized in the country of dispatch and designed in a way droppings, litter or fodder cannot escape

Changes to legislation: There are currently no known outstanding effects for the Commission Decision of 5 February 1993 on animal health conditions and veterinary certification for imports of equidae for slaughter (93/196/EEC) (repealed). (See end of Document for details)
