▼ **M2**

(\*) Indicates lower limit of analytical determination

(\*\*) Pesticide-code combination for which the MRL as set in Annex III Part B applies.

► **M7** <sup>(1)</sup> Temporary MRLs valid until 1 June 2010, pending the European Food Safety Authority's residue data opinion. After this date the MRL will be 0,1 mg/kg, unless modified by a Regulation. ◀

<sup>(2)</sup> Temporary MRL valid until 18 September 2008. After this date the MRL will be 0,05 (\*) mg/kg unless modified by a Directive or a Regulation.

<sup>(3)</sup> Temporary MRL valid until 31 December 2008 to accommodate and essential use in accordance with regulation 2076/2002/EC.

<sup>(13)</sup> As all dithiocarbamates result in the final CS2 residue, discrimination among them is generally not possible. However single residue methods are available for propineb, ziram and thiram. These methods should be implemented on a case by case basis when the specific quantification of propineb, ziram and/or thiram is required.

► **M5** <sup>(14)</sup> Monitoring data show that levels up to 0,02 mg/kg of dieldrin can be found in pumpkin seeds used for oil extraction. ◀

<sup>(e)</sup> For the complete list of products of plant and animal origin to which MRLs apply, reference should be made to Annex I.

<sup>(L)</sup> = Fat soluble

<sup>(R)</sup> = The residue definition differs for the following combinations pesticide-code number:

► **M40** 2,4-DB-code 1000000 except 1040000: sum of 2,4-DB and its conjugates, expressed as 2,4-DB ◀

► **M21** Carbendazim — code 1000000: Carbendazim and thiophanate-methyl, expressed as carbendazim ◀

► **M37 Captan (R)**: The enforcement residue definition for the following codes is 'the sum of captan and folpet': 0130000; 0152000; 0153010; 0153030; 0154030; 0154040; 0231010; 0260010; 0260020; ◀

Chlordane — code 1000000: Sum of cis- and trans-isomers and oxychlordane expressed as chlordane

Chlorpropham — code 0211000: Chlorpropham

Chlorpropham — code 1000000: Chlorpropham and 4'-hydroxychlorpropham-O-sulphonic acid (4-HSA), expressed as chlorpropham

► **M5** Clofentezine — codes 0500000 and 1000000: Sum of all compounds containing the 2-chlorobenzoyl moiety expressed as clofentezine ◀

► **M9** (+): Dimethoate — code 0140020: The maximum residue level has been established temporarily pending the finalisation of the review under article 12(2) ◀

(+): Fenamiphos — code 0233010: The maximum residue level has been established temporarily pending the finalisation of the review under article 12(2) ◀

Fenpropimorph — code 1000000: Fenpropimorph carboxylic acid (BF 421-2) expressed as fenpropimorph

► **M37 Folpet (R)**: The enforcement residue definition for the following codes is 'the sum of captan and folpet': 0130000; 0152000; 0153010; 0153030; 0154030; 0154040; 0231010; 0260010; 0260020; ◀

► **M37** Metabolite 490M1 = 2-methoxyimino-2-[2-(o-tolyloxymethyl)phenyl]acetic acid. Metabolite 490M9 = 2-[2-(4-hydroxy-2-methylphenoxyethyl)phenyl]-2-methoxy-iminoacetic acid ◀

► **M43** Lambda-Cyhalothrin - code 1000000 except 1040000: Lambda-cyhalothrin, including other mixed isomeric constituents (sum of isomers) ◀

▼ **M2**

Milbemectin — code 0500000: Milbemectin

► **M5** Spiroxamine — code 1000000: Spiroxamine carboxylic acid expressed as spiroxamine ◀

Thiabendazole — code 1000000: Sum of thiabendazole and 5-hydroxythiabendazole

► **M21** Thiofanate-methyl — code 1000000: Carbendazim and thiophanate-methyl, expressed as carbendazim ◀

▼ **M85**

**Dithiocarbamates (dithiocarbamates expressed as CS2, including maneb, mancozeb, metiram, propineb, thiram and ziram)**

**In brackets the origin of the residue (ma: maneb; mz: mancozeb; me: metiram; pr: propineb; t: thiram; z: ziram).**

The MRLs expressed as CS2 can arise from different dithiocarbamates and therefore they do not reflect a single Good Agricultural Practice (GAP). It is therefore not appropriate to use these MRLs to check compliance with a GAP.

- (+) The European Food Safety Authority identified some information on residue trials as unavailable. When re-viewing the MRL, the Commission will take into account the information referred to in the first sentence, if it is submitted by 29 October 2016, or, if that information is not submitted by that date, the lack of it. Moreover, the European Food Safety Authority highlights that the metabolite 2,5,6-trichloro-4-hydroxyphthalonitrile (SDS-3701) has not been taken into account, given that a validated method for enforcement, a complete set of residue trials, storage stability studies and data on processing of SDS-3701 are unavailable for all plant commodities. When re-viewing the MRL, the Commission will take this information into account, if it is submitted by 29 October 2016, or, if that information is not submitted by that date, the lack of it.
