- 2 Multi-annual national sampling programmes shall include, in particular:
  - a a sampling design for biological data following fleet-fishery based sampling including, where appropriate, recreational fisheries;
  - b a sampling design for ecosystem data that allows the impact of the fisheries sector on the marine ecosystem to be estimated and that contributes to monitoring of the state of the marine ecosystem;
  - c a sampling design for socio-economic data that permits the economic situation of the fisheries sector to be assessed and enables its performance over time to be analysed, and impact assessments of measures undertaken, or proposed to be carried out.
- 3 The protocols and the methods used for the establishment of national sampling programmes shall be given by Member States and shall be, as far as possible:
  - a stable over time;
  - b standardised within regions;

2 The tasks of the at-sea monitoring shall be determined by the Member States.

3 The masters of Community fishing vessels shall accept on board samplers operating under the at-sea monitoring scheme and designated by the body in charge of the implementation of the national programme and cooperate with them in order to allow them to discharge their duties while on board Community fishing vessels.

In such cases, data shall be collected through a self-sampling programme, carried out by the crew of the Community fishing vessel, and designed and controlled by the body in charge of the implementation of the national programme.
