ANNEX XVI

Instructions for taking samples of fresh grapes and processing them into wine for analysis by the isotopic methods referred to in Article 88(1)

I. SAMPLING OF GRAPES

- A. Each sample must consist of at least 10 kg of ripe grapes of the same variety. They are to be taken in the condition in which they are found. Sampling must be carried out during the period when the plot in question is harvested. The grapes collected must be representative of the whole plot. The fresh grape samples, or the derived pressed must, may be preserved by freezing until further usage. Only in the case that oxygen-18 measurement of the water of the must is foreseen, an aliquot of must may be taken separately and preserved after pressing the whole grape sample.
- B. When the samples are taken, a description sheet is to be drawn up. This sheet must include a first part concerning the sampling of the grapes and a second part concerning vinification. It must be kept with the sample and must accompany it during all

Status: Point in time view as at 12/03/2013.

Changes to legislation: There are currently no known outstanding effects for the Commission Regulation (EC) No 555/2008. (See end of Document for details)

transportation. It must be kept up to date by means of an entry regarding each type of treatment undergone by the sample. The description sheet concerning the sampling is to be drawn up in accordance with Part I of the questionnaire in Annex XVIII.

II. VINIFICATION

- A. Vinification must be carried out by the competent body or by a department authorised to do so by that body, wherever possible under conditions comparable with the normal conditions in the production area of which the sample is representative. Vinification should result in the total transformation of the sugar into alcohol, i.e. in less than 2 g/l of residual sugar. However, in certain cases, e.g. for ensuring a better representativity, higher amounts of residual sugars can be accepted. As soon as the wine has clarified and stabilised by means of SO₂, it must be put in 75 cl bottles and labelled.
- B. The description sheet for vinification is to be drawn up in accordance with Part II of the questionnaire in Annex XVIII.

ANNEX XX

Collection of samples in the context of assistance between control bodies as referred in Article 92

1. When samples of wine, grape must or another liquid wine product are taken in the context of assistance between control bodies, the competent body shall ensure that:
 - in the case of products in containers of not more than 60 litres warehoused in one lot, the samples are representative of the entire lot,
 - in the case of products in containers with a nominal capacity of more than 60 litres, the samples are representative of the contents of the container from which the samples are taken.
2. Samples shall be taken by pouring the product in question into at least five clean containers each having a nominal capacity of not less than 75 cl. In the case of products as referred to in the first indent of paragraph 1, sampling may also take the form of removing at least five containers having a nominal capacity of not less than 75 cl from the lot to be examined.

Where samples of wine distillate are to be analysed by nuclear magnetic resonance of deuterium, the samples shall be placed in containers having a nominal capacity of 25 cl, or even 5 cl where they are to be sent from one official laboratory to another.

The samples shall be taken, closed where appropriate, and sealed in the presence of a representative of the establishment where the sample is taken or of a representative of the carrier if the sample is taken during transport. If no representative is present, the report referred to in paragraph 4 shall mention this fact.

Each sample shall be fitted with an inert and non-reusable closure.

3. Each sample shall bear a label which complies with part A of Annex XXI.

Where the container is too small for the prescribed label to be attached thereto, the container shall be marked with an indelible number and the required information shall be indicated on a separate sheet.

The representative of the establishment where the sample is taken or the representative of the carrier shall be requested to sign the label or, as applicable, the sheet.

Status: Point in time view as at 12/03/2013.

Changes to legislation: There are currently no known outstanding effects for the Commission Regulation (EC) No 555/2008. (See end of Document for details)

4. The official of the competent body authorised to take samples shall draw up a written report in which he shall note any observations he considers important for assessing the samples. In the report he shall note, where necessary, any statements by the carrier's representative or the representative of the establishment where the sample was taken, and shall request such representative to affix his signature. He shall note the amount of the product from which the sample was taken. If the signatures referred to above and in the third subparagraph of paragraph 3 have been refused, the report shall mention this fact.
5. Wherever samples are taken, one of the samples shall remain as a control sample in the establishment where the sample was taken, and another with the competent body whose official took the sample. Three of the samples shall be sent to an official laboratory, which will carry out the analytical or organoleptic examination. There one of the samples shall be analysed. Another shall be kept as a control sample. Control samples shall be kept for a minimum period of three years after sampling.
6. Consignments of samples shall bear on the external packaging a red label complying with the model in part B of Annex XXI. The label shall be 50 mm by 25 mm.

When dispatching samples, the competent body of the Member State from which the samples are sent shall affix its stamp partially on the outer packaging of the parcel and partially on the red label.
