

ANNEX II

Security features of the certificate of professional competence

The certificate must have at least two of the following security features:

- a hologram,
- special fibres in the paper which become visible under UV light,
- at least one microprint line (printing visible only with a magnifying glass and not reproduced by photocopying machines),
- tactile characters, symbols or patterns,
- double numbering: serial number and issue number,
- a security design background with fine guilloche patterns and rainbow printing.
