## ANNEX I

### CROP-SPECIFIC PAYMENT FOR RICE

Calculation of the coefficient of reduction referred to in Article 8

1. For the observation of a possible overrun of the base area referred to in Article 76 of Regulation (EC) No 73/2009, the competent authority of the Member State shall take into account, on the one hand, the base areas or sub-base areas, fixed in Article 75 of that Regulation, and on the other hand, the total of the areas for which aid applications have been submitted for these base areas and sub-base areas.
2. In establishing the total area for which aid applications have been submitted, account shall not be taken of applications or parts of applications that a check has shown to be clearly unjustified.
3. If an overrun is observed for certain base areas or sub-base areas, the Member State shall establish for these, the percentage of overrun, calculated with two decimal places according to the deadline fixed in Article 6 of this Regulation. When an overrun can be foreseen, the Member State shall inform the producers forthwith.
4. The coefficient of reduction of the crop-specific payment for rice shall be calculated, in accordance with Article 76 of Regulation (EC) No 73/2009, according to the following formula:

Reduction coefficient = reference area of the sub-base area divided by the total area for which aid applications have been submitted for this sub-base area.

The reduced crop-specific payment for rice shall be calculated according to the following formula:

Reduced crop-specific aid for rice = crop-specific aid for rice multiplied by the reduction coefficient.

This reduction coefficient and this reduced crop-specific payment for rice shall be calculated for each sub-base area, after application of the redistribution provided for in Article 76(2) of Regulation (EC) No 73/2009. Redistribution shall be done to the profit of the sub-base areas for which limits have been exceeded. It shall be done proportionally to the overruns noted in the sub-base areas for which limits have been exceeded.

## ANNEX II

### TEST FOR BITTER LUPINS REFERRED TO IN ARTICLE 13

To be performed on a sample of 200 grains taken from a batch of 1 kg from each lot of 20 t maximum.

The test is intended solely to provide qualitative evidence of the presence of bitter grains in the sample. The homogeneity tolerance is 1 grain per 100. Use the Grain-Cut method according to Von Sengbusch (1942), Ivanov and Smirnova (1932) and Eggebrecht (1949). Cut the dry or swollen grains crosswise. Place the half-grains in a sieve and dip in an iodine solution for 10 seconds, then rinse under water for 5 seconds. The cut surfaces of bitter grains turn brown while those low in alkaloids remain yellow.
