

ANNEX I

SPECIFIC EMISSIONS TARGETS

1. The specific emissions of CO₂ for each new passenger car, measured in grams per kilometre, shall, for the purposes of the calculations in this Annex, be determined in accordance with the following formulae:

- (a) From 2012 to 2015:

$$\text{Specific emissions of CO}_2 = 130 + a \times (M - M_0)$$

Where:

M	=	mass of the vehicle in kilograms (kg)
M ₀	=	1 372,0
a	=	0,0457

- (b) From 2016:

$$\text{Specific emission of CO}_2 = 130 + a \times (M - M_0)$$

Where:

M	=	mass of the vehicle in kilograms (kg)
M ₀	=	the value adopted pursuant to Article 13(2)
a	=	0,0457

2. The specific emissions target for a manufacturer in a calendar year shall be calculated as the average of the specific emissions of CO₂ of each new passenger car registered in that calendar year of which it is the manufacturer.
