

## ANNEX I

**SPECIFIC DEFINITIONS**As referred to in Article 2(4)

1. 'nutrition declaration' or 'nutrition labelling' means information stating the:
  - (a) energy value; or
  - (b) energy value and one or more of the following nutrients only:
    - fat (saturates, mono-unsaturates, polyunsaturates),
    - carbohydrate (sugars, polyols, starch),
    - salt,
    - fibre,
    - protein,
    - any of the vitamins or minerals listed in point 1 of Part A of Annex XIII, and present in significant amounts as defined in point 2 of Part A of Annex XIII,
2. 'fat' means total lipids, and includes phospholipids;
3. 'saturates' means fatty acids without double bond;
4. 'trans fat' means fatty acids with at least one non-conjugated (namely interrupted by at least one methylene group) carbon-carbon double bond in the trans configuration;
5. 'mono-unsaturates' means fatty acids with one cis double bond;
6. 'polyunsaturates' means fatty acids with two or more cis, cis-methylene interrupted double bonds;
7. 'carbohydrate' means any carbohydrate which is metabolised by humans, and includes polyols;
8. 'sugars' means all monosaccharides and disaccharides present in food, but excludes polyols;
9. 'polyols' means alcohols containing more than two hydroxyl groups;
10. 'protein' means the protein content calculated using the formula: protein = total Kjeldahl nitrogen  $\times$  6,25;
11. 'salt' means the salt equivalent content calculated using the formula: salt = sodium  $\times$  2,5;
12. 'fibre' means carbohydrate polymers with three or more monomeric units, which are neither digested nor absorbed in the human small intestine and belong to the following categories:
  - edible carbohydrate polymers naturally occurring in the food as consumed,
  - edible carbohydrate polymers which have been obtained from food raw material by physical, enzymatic or chemical means and which have a beneficial physiological effect demonstrated by generally accepted scientific evidence,
  - edible synthetic carbohydrate polymers which have a beneficial physiological effect demonstrated by generally accepted scientific evidence,

---

**Status:** This is the original version as it was originally adopted in the EU. This legislation may since have been updated - see the latest available (revised) version

---

13. 'average value' means the value which best represents the amount of the nutrient which a given food contains, and reflects allowances for seasonal variability, patterns of consumption and other factors which may cause the actual value to vary.
