Commission Regulation (EU) No 109/2012 of 9 February 2012 amending Regulation (EC) No 1907/2006 of the European Parliament and of the Council on the Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH) as regards Annex XVII (CMR substances) (Text with EEA relevance)

## COMMISSION REGULATION (EU) No 109/2012

## of 9 February 2012

### amending Regulation (EC) No 1907/2006 of the European Parliament and of the Council on the Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH) as regards Annex XVII (CMR substances)

## (Text with EEA relevance)

## THE EUROPEAN COMMISSION,

Having regard to the Treaty on the Functioning of the European Union,

Having regard to Regulation (EC) No 1907/2006 of the European Parliament and of the Council of 18 December 2006 concerning the Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH), establishing a European Chemicals Agency, amending Directive 1999/45/EC and repealing Council Regulation (EEC) No 793/93 and Commission Regulation (EC) No 1488/94 as well as Council Directive 76/769/EEC and Commission Directives 91/155/ EEC, 93/67/EEC, 93/105/EC and 2000/21/EC<sup>(1)</sup>, and in particular Article 68(2) thereof,

Whereas:

- (1) Annex XVII to Regulation (EC) No 1907/2006, in its entries 28 to 30, prohibits the sale to the general public of substances that are classified as carcinogenic, mutagenic or toxic for reproduction (CMR), categories 1A or 1B or of mixtures containing them in concentration above specified concentration limits. The substances concerned are listed in Appendices 1 to 6 to Annex XVII.
- (2) Regulation (EC) No 1272/2008 of the European Parliament and of the Council of 16 December 2008 on classification, labelling and packaging of substances and mixtures, amending and repealing Directives 67/548/EEC and 1999/45/EC, and amending Regulation (EC) No 1907/2006<sup>(2)</sup> was amended on 5 September 2009 by Commission Regulation (EC) No 790/2009<sup>(3)</sup> in order to include a number of newly classified CMR substances. Appendices 1 to 6 to Annex XVII to Regulation (EC) No 1907/2006 should be amended in order to align them to the entries concerning CMR substances in Regulation (EC) No 790/2009.
- (3) Under Article 68 (2) of Regulation (EC) No 1907/2006, restrictions may be proposed on the consumer use of CMR substances categories 1A and 1B on their own, in a mixture or in an article.
- (4) A number of boron compounds were found to be toxic for reproduction and were classified as toxic for reproduction, hazard class and category Repr. 1B, hazard

statement H360FD under the Regulation (EC) No 790/2009. A market survey conducted for the Commission<sup>(4)</sup> on the uses of borates in mixtures sold to the general public reported that sodium perborate, tetra and monohydrate, are used in a concentration exceeding their specific concentration limit specified in Regulation (EC) No 790/2009 in household detergents and cleaners.

- (5) On 29 April 2010, the Risk Assessment Committee (RAC) of the European Chemicals Agency (ECHA) gave an opinion on the use of boron compounds in photographic applications<sup>(5)</sup>. In its opinion, the RAC noted that there were 'more possible sources that contribute to the total exposure to boron of consumers', and that these 'additional sources have to be considered in the risk assessment of boron compounds'. Multiple sources of exposure to boron of consumers were not considered in previous risk assessments, in contrast with current concerns with multiple sources of exposure in general.
- (6)Sodium perborate, tetra and monohydrate, are mainly used as bleaching agents in laundry detergents and machine dishwashing products. The Rapporteur Member State, responsible for conducting the risk evaluation on sodium perborate under Council Regulation (EEC) No 793/93 of 23 March 1993 on the evaluation and control of the risks of existing substances<sup>(6)</sup>, submitted a dossier in accordance with Annex XV of Regulation (EC) No 1907/2006 to the European Chemicals Agency pursuant to Article 136 of that Regulation. That risk assessment, published in 2007, concluded that the use of sodium perborate in laundry detergents and household cleaners, considered in isolation as a single source of exposure to boron, did not pose an unacceptable risk to the general public. Nevertheless, because the sources of exposure of the general public to boron are multiple, as expressed in the 2010 opinion of the RAC, and due to its reproductive toxicity it is desirable to reduce the exposure of the general public to boron. Moreover, because the consumer population exposed to boron from household detergents and cleaners is considerable, and because alternatives to perborates are available in these applications, it is appropriate to restrict the use of perborates in household detergents and cleaners. However, in order to allow certain manufacturers to adapt and replace, where necessary, boron compounds with alternatives in these applications, a time-limited derogation should be granted.
- (7) The measures provided for in this Regulation are in accordance with the opinion of the Committee established under Article 133 of Regulation (EC) No 1907/2006,

HAS ADOPTED THIS REGULATION:

# Article 1 U.K.

Annex XVII to Regulation (EC) No 1907/2006 is amended in accordance with the Annex to this Regulation.

This Regulation shall enter into force on the 20th day following its publication in the *Official Journal of the European Union*.

It shall apply on 1 June 2012.

This Regulation shall be binding in its entirety and directly applicable in all Member States.

Done at Brussels, 9 February 2012.

For the Commission The President José Manuel BARROSO

## ANNEX U.K.

Annex XVII to Regulation (EC) No 1907/2006 is amended as follows:

- (1) In the table setting out the designation of the substances, groups of substances and mixtures and the conditions of restriction, in Column 2 of entries 28, 29 and 30, in paragraph 2, the following point (e) is added:
  - (e) the substances listed in Appendix 11, column 1, for the applications or uses listed in Appendix 11, column 2. Where a date is specified in column 2 of Appendix 11, the derogation shall apply until the said date.
- (2) In the Appendices 1 to 6, in the foreword, a note B is inserted between note A and note C, as follows: *Note B*:

Some substances (acids, bases, etc.) are placed on the market in aqueous solutions at various concentrations and, therefore, these solutions require different classification and labelling since the hazards vary at different concentrations.

- (3) In Appendix 1 the table is amended as follows:
  - (a) The following entries are inserted in accordance with the order of the entries set out in Appendix 1 of Annex XVII of Regulation (EC) No 1907/2006:

		~		
Nickel dihydroxide; [1]	028-008-00- X	235-008-5 [1]	12054-48-7 [1]

Distillates (coal tar), naphthalene oils; Naphthalene Oil; [A complex combination of hydrocarbons obtained by the distillation of coal tar. It consists primarily of aromatic and other hydrocarbons, phenolic compounds and aromatic nitrogen compounds and distills in the approximate range of 200 °C to 250 °C (392 °F to 482 °F).]	648-085-00-9	283-484-8	84650-04-4	J, M

	1		1	
Extract residues (coal), low temp. coal tar alk.; [The residue from low temperature coal tar oils after an alkaline wash, such as aqueous sodium hydroxide, to remove crude coal tar acids. Composed primarily of hydrocarbons and aromatic nitrogen bases.]	648-110-00-3	310-191-5	122384-78-5	J, M
Tar acids, coal, crude; Crude Phenols; [The reaction product obtained by neutralizing coal tar oil alkaline extract with an acidic solution, such as aqueous sulfuric acid, or gaseous carbon dioxide, to obtain the free acids. Composed primarily of tar acids such as phenol, cresols, and xylenols.]	648-116-00-6	266-019-3	65996-85-2	J, M

(c) The following entries 024-004-00-7; 609-007-00-9; 612-099-00-3; 612-151-00-5; 648-043-00-X; 648-080-00-1; 648-098-00-X; 648-099-00-5; 648-100-00-9; 648-102-00-X; 648-138-00-6; 650-017-00-8 are replaced by:

Sodium dichromate	024-004-00-7	234-190-3	10588-01-9	
2,4- Dinitrotoluene [1]	609-007-00-9 ;	204-450-0 [1]	121-14-2 [1]	
Dinitrotoluene [2]	.,	246-836-1 [2]	25321-14-6 [2]	
4-Methyl-m- phenylenedian 2,4- Toluenediamin		202-453-1	95-80-7	
Methyl- phenylene diamine; Diaminotoluen [technical product – reaction mass of 4- methyl-m- phenylene diamine (EC No 202-453-1 and 2- methyl-m- phenylene diamine (EC No 212-513-9	)			
Creosote oil, acenaphthene fraction, acenaphthene- free; Wash Oil Redistillate; [The oil remaining after removal by a crystallization process of acenaphthene from acenaphthene oil from		292-606-9	90640-85-0	М

coal tar. Composed primarily of naphthalene and alkylnaphthale	enes.]			
Residues (coal tar), creosote oil distn.; Wash Oil Redistillate; [The residue from the fractional distillation of wash oil boiling in the approximate range of 270 °C to 330 °C (518 °F to 626 °F). It consists predominantly of dinuclear aromatic and heterocyclic hydrocarbons.		295-506-3	92061-93-3	М
Creosote oil, acenaphthene fraction; Wash Oil; [A complex combination of hydrocarbons produced by the distillation of coal tar and boiling in the range of approximately 240 °C to 280 °C (464 °F to 536 °F). Composed primarily of acenaphthene,		292-605-3	90640-84-9	М

naphthalene and alkyl naphthalene.]				
Creosote oil; [A complex combination of hydrocarbons obtained by the distillation of coal tar. It consists primarily of aromatic hydrocarbons and may contain appreciable quantities of tar acids and tar bases. It distills at the approximate range of 200 °C to 325 °C (392 °F to 617 °F).]	648-099-00-5	263-047-8	61789-28-4	М
Creosote oil, high-boiling distillate; Wash Oil; [The high- boiling distillation fraction obtained from the high temperature carbonization of bituminous coal which is further refined to remove excess crystalline salts. It consists primarily of	648-100-00-9	274-565-9	70321-79-8	М

creosote oil with some of the normal polynuclear aromatic salts, which are components of coal tar distillates, removed. It is crystal free at approximately 5 °C (41 °F).]				
Extract residues (coal), creosote oil acid; Wash Oil Extract Residue; [A complex combination of hydrocarbons from the base-freed fraction from the distillation of coal tar, boiling in the range of approximately 250 °C to 280 °C (482 °F to 536 °F). It consists predominantly of biphenyl and isomeric diphenylnapht		310-189-4	122384-77-4	М
Creosote oil, low-boiling distillate; Wash Oil; [The low- boiling	648-138-00-6	274-566-4	70321-80-1	М

distillation fraction obtained from the high temperature carbonization of bituminous coal, which			
is further refined to remove excess			
crystalline salts. It consists primarily of creosote oil with some of the normal polynuclear aromatic salts, which are components of coal tar distillate, removed. It is crystal free at approximately 38 °C (100 °F).]			
 Refractory Ceramic Fibres, Special Purpose Fibres, with the exception of those specified elsewhere in this Annex; [Man-made vitreous (silicate) fibres with random orientation with alkaline oxide and	650-017-00-8		A, R

alkali earth		
oxide (Na <sub>2</sub> O		
+K <sub>2</sub> O+CaO+		
MgO+BaO)		
content less

weight]		

(5) In Appendix 4, the table is amended as follows:

- (a) The following entry is deleted: 024-004-01-4;
- (b) The following entries are inserted in accordance with the order of the entries set out in Appendix 4 of Annex XVII of Regulation (EC) No 1907/2006:

O-isobutyl- N-ethoxy carbonylthioca	006-094-00- X arbamate	434-350-4	103122-66-3	
O-hexyl-N- ethoxycarbony	006-102-00-1 Ithiocarbamate	432-750-3		
Diethyl(2- (hydroxymeth Methyl ethyl(2-	015-196-00-3 ylcarbamoyl)et ylcarbamoyl)et ylcarbamoyl)et	hyl)phosphona hyl)phosphona	te;	
2-Chloro-6- fluoro- phenol	604-082-00-4	433-890-8	2040-90-6	
(2- chloroethyl) (3- hydroxypropy chloride	612-246-00-1 l)ammonium	429-740-6	40722-80-3	
Colchicine	614-005-00-6	200-598-5	64-86-8	
N-[6,9- dihydro-9- [[2- hydroxy-1- (hydroxymeth oxo-1H- purin-2- yl]acetamide	616-148-00- X yl)ethoxy]meth	424-550-1 yl]-6-	84245-12-5	
Tar oils, brown-coal; Light Oil;	648-002-00-6	302-674-4	94114-40-6	J

[The distillate from lignite tar boiling in the range of approximately 80 °C to 250 °C (176 °F to 482 °F). Composed primarily of aliphatic and aromatic hydrocarbons and monobasic phenols.]				
Benzol forerunnings (coal); Light Oil Redistillate, low boiling; [The distillate from coke oven light oil having an approximate distillation range below 100 °C (212 °F). Composed primarily of C <sub>4</sub> to C <sub>6</sub> aliphatic hydrocarbons.	648-003-00-1	266-023-5	65996-88-5	J
Distillates (coal tar), benzole fraction, BTX-rich; Light Oil Redistillate, low boiling; [A residue from the distillation of crude benzole	648-004-00-7	309-984-9	101896-26-8	J

to remove benzole fronts. Composed primarily of benzene, toluene and xylenes boiling in the range of approximately 75 °C to 200 °C (167 °F to 392 °F).]				
Aromatic hydrocarbons, $C_{6-10}$ , $C_8$ - rich; Light Oil Redistillate, low boiling	648-005-00-2	292-697-5	90989-41-6	J
Solvent naphtha (coal), light; Light Oil Redistillate, low boiling	648-006-00-8	287-498-5	85536-17-0	1
Solvent naphtha (coal), xylene- styrene cut; Light Oil Redistillate, intermediate boiling	648-007-00-3	287-502-5	85536-20-5	J
Solvent naphtha (coal), coumarone- styrene contg.; Light Oil Redistillate, intermediate boiling	648-008-00-9	287-500-4	85536-19-2	J
Naphtha (coal), distn. residues;	648-009-00-4	292-636-2	90641-12-6	J

Light Oil Redistillate, high boiling; [The residue remaining from the distillation of recovered naphtha. Composed primarily of naphthalene and condensation products of indene and styrene.]				
Aromatic hydrocarbons, $C_8$ ; Light Oil Redistillate, high boiling	648-010-00- X	292-694-9	90989-38-1	J
Aromatic hydrocarbons, C <sub>8-9</sub> , hydrocarbon resin polymn. by- product; Light Oil Redistillate, high boiling; [A complex combination of hydrocarbons obtained from the evaporation of solvent under vacuum from polymerized hydrocarbon resin. It consists predominantly of aromatic hydrocarbons having carbon		295-281-1	91995-20-9	J

numbers predominantly in the range of $C_8$ through $C_9$ and boiling in the range of approximately 120 °C to 215 °C (248 °F to 419 °F).]				
Aromatic hydrocarbons, C <sub>9-12</sub> , benzene distn.; Light Oil Redistillate, high boiling	648-013-00-6	295-551-9	92062-36-7	J
Extract residues (coal), benzole fraction alk., acid ext.; Light Oil Extract Residues, low boiling; [The redistillate from the distillate, freed of tar acids and tar bases, from bituminous coal high temperature tar boiling in the approximate range of 90 °C to 160 °C (194 °F to 320 °F). It consists predominantly	648-014-00-1	295-323-9	91995-61-8	J

of benzene, toluene and xylenes.]			
Extract residues (coal tar), benzole fraction alk., acid ext.; Light Oil Extract Residues, low boiling; [A complex combination of hydrocarbons obtained by the redistillation of the distillate of high temperature coal tar (tar acid and tar base free). It consists predominantly of unsubstituted mononuclear aromatic hydrocarbons boiling in the range of 85 °C to 195 °C (185 °F to 383 °F).]	648-015-00-7	93821-38-6	J
residues (coal), benzole fraction acid; Light Oil Extract Residues, low boiling;			

[An acid sludge by- product of the sulfuric acid refining of crude high temperature coal. Composed primarily of sulfuric acid and organic compounds.]				
Extract residues (coal), light oil alk., distn. overheads; Light Oil Extract Residues, low boiling; [The first fraction from the distillation of aromatic hydrocarbons, coumarone, naphthalene and indene rich prefractionator bottoms or washed carbolic oil boiling substantially below 145 °C (293 °F). Composed primarily of $C_7$ and $C_8$ aliphatic and aromatic hydrocarbons.		292-625-2	90641-02-4	J
Extract residues (coal), light oil alk., acid	648-018-00-3	309-867-2	101316-62-5	J

ext., indene fraction; Light Oil Extract Residues, intermediate boiling				
Extract residues (coal), light oil alk., indene naphtha fraction; Light Oil Extract Residues, high boiling; [The distillate from aromatic hydrocarbons, coumarone, naphthalene and indene rich prefractionator bottoms or washed carbolic oils, having an approximate boiling range of 155 °C to 180 °C (311 °F to 356 °F). Composed primarily of indene, indan and trimethylbenze		292-626-8	90641-03-5	J
Solvent naphtha (coal); [The distillate from either high temperature coal tar,	648-020-00-4	266-013-0	65996-79-4	J

coke oven light oil, or coal tar oil alkaline extract residue having an approximate distillation range of 130 °C to 210 °C (266 °F to 410 °F). Composed primarily of indene and other polycyclic ring systems containing a single aromatic ring. May contain phenolic compounds and aromatic nitrogen bases.]; Light Oil Extract Residues, high boiling				
Distillates (coal tar), light oils, neutral fraction; Light Oil Extract Residues, high boiling; [A distillate from the fractional distillation of high temperature coal tar. Composed primarily	648-021-00- X	309-971-8	101794-90-5	J

of alkyl- substituted one ring aromatic hydrocarbons boiling in the range of approximately 135 °C to 210 °C (275 °F to 410 °F). May also include unsaturated hydrocarbons such as indene and coumarone.]				
Distillates (coal tar), light oils, acid exts.; Light Oil Extract Residues, high boiling; [This oil is a complex mixture of aromatic hydrocarbons, primarily indene, naphthalene, coumarone, phenol, and o-, m- and p-cresol and boiling in the range of 140 °C to 215 °C (284 °F to 419 °F).]	648-022-00-5	292-609-5	90640-87-2	J
Distillates (coal tar), light oils; Carbolic Oil; [A complex combination of hydrocarbons	648-023-00-0	283-483-2	84650-03-3	J

obtained by distillation of coal tar. It consists of aromatic and other hydrocarbons, phenolic compounds and aromatic nitrogen compounds and distills at the approximate range of 150 °C to 210 °C (302 °F to 410 °F).]				
Tar oils, coal; Carbolic Oil; [The distillate from high temperature coal tar having an approximate distillation range of 130 °C to 250 °C (266 °F to 410 °F). Composed primarily of naphthalene, alkylnaphthale phenolic compounds, and aromatic nitrogen bases.]		266-016-7	65996-82-9	J
Extract residues (coal), light oil alk., acid ext.; Carbolic Oil Extract Residue;	648-026-00-7	292-624-7	90641-01-3	J

[The oil resulting from the acid washing of alkali- washed carbolic oil to remove the minor amounts of basic compounds (tar bases). Composed primarily of indene, indan and alkylbenzenes	-			
Extract residues (coal), tar oil alk.; Carbolic Oil Extract Residue; [The residue obtained from coal tar oil by an alkaline wash such as aqueous sodium hydroxide after the removal of crude coal tar acids. Composed primarily of naphthalenes and aromatic nitrogen bases.]	648-027-00-2	266-021-4	65996-87-4	J
Extract oils (coal), light oil; Acid Extract; [The aqueous extract produced by an acidic	648-028-00-8	292-622-6	90640-99-6	J

wash of alkali- washed carbolic oil. Composed primarily of acid salts of various aromatic nitrogen bases including pyridine, quinoline and their alkyl derivatives.]				
Pyridine, alkyl derivs.; Crude Tar Bases; [The complex combination of polyalkylated pyridines derived from coal tar distillation or as high- boiling distillates approximately above 150 °C (302 °F) from the reaction of ammonia with acetaldehyde, formaldehyde or paraformaldeh	yde.]		68391-11-7	J
Tar bases, coal, picoline fraction; Distillate Bases; [Pyridine bases boiling in the	648-030-00-9	295-548-2	92062-33-4	J

range of approximately 125 °C to 160 °C (257 °F to 320 °F) obtained by distillation of neutralized acid extract of the base- containing tar fraction obtained by the distillation of bituminous coal tars. Composed chiefly of lutidines and picolines.]				
Tar bases, coal, lutidine fraction; Distillate Bases	648-031-00-4	293-766-2	91082-52-9	J
Extract oils (coal), tar base, collidine fraction; Distillate Bases; [The extract produced by the acidic extraction of bases from crude coal tar aromatic oils, neutralization, and distillation of the bases. Composed primarily of collidines, aniline, toluidines,	648-032-00- X	273-077-3	68937-63-3	J

	648 033 00 5	205 5/3 5	92062 28 7	T
xylidines.] Tar bases, coal, collidine fraction; Distillate Bases; [The distillation fraction boiling in the range of approximately 181 °C to 186 °C (356 °F to 367 °F) from the crude bases obtained from the neutralized, acid- extracted base- containing tar fractions	648-033-00-5	295-543-5	92062-28-7	J
obtained by the distillation of bituminous coal tar. It contains chiefly aniline and collidines.]				
Tar bases, coal, aniline fraction; Distillate Bases; [The distillation fraction boiling in the range of approximately 180 °C to 200 °C (356 °F to 392 °F)	648-034-00-0	295-541-4	92062-27-6	J

from the crude bases obtained by dephenolating and debasing the carbolated oil from the distillation of coal tar. It contains chiefly aniline, collidines, lutidines and toluidines.]				
Tar bases, coal, toluidine fraction; Distillate Bases	648-035-00-6	293-767-8	91082-53-0	J
Distillates (petroleum), alkene- alkyne manuf. pyrolysis oil, mixed with high- temp. coal tar, indene fraction; Redistillates; [A complex combination of hydrocarbons obtained as a redistillate from the fractional distillation of bituminous coal high temperature tar and residual oils that are obtained by the pyrolytic production of	648-036-00-1	295-292-1	91995-31-2	J

alkenes and alkynes from petroleum products or natural gas. It consists predominantly of indene and boils in a range of approximately 160 °C to 190 °C (320 °F to 374 °F).]				
Distillates (coal), coal tar-residual pyrolysis oils, naphthalene oils; Redistillates; [The redistillate obtained from the fractional distillation of bituminous coal high temperature tar and pyrolysis residual oils and boiling in the range of approximately 190 °C to 270 °C (374 °F to 518 °F). Composed primarily of substituted dinuclear aromatics.]	648-037-00-7	295-295-8	91995-35-6	J
Extract oils (coal), coal tar-residual pyrolysis	648-038-00-2	295-329-1	91995-66-3	J

oils, naphthalene oil, redistillate; Redistillate; [The redistillate from the fractional distillation of dephenolated and debased methylnaphtha oil obtained from bituminous coal high temperature tar and pyrolysis residual oils boiling in the approximate range of 220 °C to 230 °C (428 °F to 446 °F). It consists predominantly of unsubstituted				
and	]			
Extract oils (coal), coal tar-residual pyrolysis oils, naphthalene oils; Redistillates; [A neutral oil obtained by debasing and dephenolating the oil obtained from the	648-039-00-8	310-170-0	122070-79-5	J

distillation of high temperature tar and pyrolysis residual oils which has a boiling range of 225 °C to 255 °C (437 °F to 491 °F). Composed primarily of substituted dinuclear aromatic hydrocarbons.				
Extract oils (coal), coal tar residual pyrolysis oils, naphthalene oil, distn. residues; Redistillates; [Residue from the distillation of dephenolated and debased methylnaphtha oil (from bituminous coal tar and pyrolysis residual oils) with a boiling range of 240 °C to 260 °C (464 °F to 500 °F). Composed	648-040-00-3	310-171-6	122070-80-8	J
primarily of substituted dinuclear aromatic and heterocyclic hydrocarbons.	]

compounds and distills in the approximate range of 200 °C to 250 °C (392 °F to 482 °F).]				
Distillates (coal tar), naphthalene oils, naphthalene- low; Naphthalene Oil Redistillate; [A complex combination of hydrocarbons obtained by crystallization of naphthalene oil.Composed primarily of naphthalenes, alkyl naphthalenes and phenolic compounds.]	648-086-00-4	284-898-1	84989-09-3	J, M
Distillates (coal tar), naphthalene oil crystn. mother liquor; Naphthalene Oil Redistillate; [A complex combination of organic compounds obtained as a filtrate from the crystallization of the naphthalene	648-087-00- X	295-310-8	91995-49-2	J, M

fraction from coal tar and boiling in the range of approximately 200 °C to 230 °C (392 °F to 446 °F). Contains chiefly naphthalene, thionaphthene and alkylnaphthale				
Extract residues (coal), naphthalene oil, alk.; Naphthalene Oil Extract Residue; [A complex combination of hydrocarbons obtained from the alkali washing of naphthalene oil to remove phenolic compounds (tar acids). It is composed of naphthalene and alkyl naphthalenes.]		310-166-9	121620-47-1	J, M
Extract residues (coal), naphthalene oil, alk., naphthalene- low; Naphthalene Oil Extract Residue;	648-089-00-0	310-167-4	121620-48-2	J, M

[A complex combination of hydrocarbons remaining after the removal of naphthalene from alkali- washed naphthalene oil by a crystallization process. It is composed primarily of naphthalene and alkyl naphthalenes.]				
Distillates (coal tar), naphthalene oils, naphthalene- free, alk. exts.; Naphthalene Oil Extract Residue; [The oil remaining after the removal of phenolic compounds (tar acids) from drained naphthalene oil by an alkali wash. Composed primarily of naphthalene and alkyl naphthalenes.]	648-090-00-6	292-612-1	90640-90-7	J, M
Extract residues (coal), naphthalene oil alk., distn. overheads;	648-091-00-1	292-627-3	90641-04-6	J, M

Naphthalene Oil Extract Residue; [The distillate from alkali- washed naphthalene oil having an approximate distillation range of 180 °C to 220 °C (356 °F to 428 °F). Composed primarily of naphthalene, alkylbenzeness indene and indan.]				
Distillates (coal tar), naphthalene oils, methylnaphtha fraction; Methylnaphth Oil; [A distillate from the fractional distillation of high temperature coal tar. Composed primarily of substituted two ring aromatic hydrocarbons and aromatic nitrogen bases boiling in the range of approximately 225 °C to 255 °C	alene	309-985-4	101896-27-9	J, M

(437 °F to 491 °F).]				
Distillates (coal tar), naphthalene oils, indole- methylnaphtha fraction; Methylnaphth Oil; [A distillate from the fractional distillation of high temperature coal tar. Composed primarily of indole and methylnaphtha boiling in the range of approximately 235 °C to 255 °C (455 °F to 491 °F).]	alene	309-972-3	101794-91-6	J, M
Distillates (coal tar), naphthalene oils, acid exts.; Methylnaphth Oil Extract Residue; [A complex combination of hydrocarbons obtained by debasing the methylnaphtha fraction obtained by the distillation of coal tar and boiling in the range of approximately 230 °C	alene	295-309-2	91995-48-1	J, M

to 255 °C (446 °F to 491 °F). Contains chiefly 1(2)- methylnaphtha naphthalene, dimethylnapht and biphenyl.]	-			
Extract residues (coal), naphthalene oil alk., distn. residues; Methylnaphth Oil Extract Residue; [The residue from the distillation of alkali- washed naphthalene oil having an approximate distillation range of 220 °C to 300 °C (428 °F to 572 °F). Composed primarily of naphthalene, alkylnaphthale and aromatic nitrogen bases.]	enes		90641-05-7	J, M
Extract oils (coal), acidic, tar- base free; Methylnaphth Oil Extract Residue; [The extract oil boiling in the range of approximately		284-901-6	84989-12-8	J, M

220 °C to 265 °C (428 °F to 509 °F) from coal tar alkaline extract residue produced by an acidic wash such as aqueous sulfuric acid after distillation to remove tar bases. Composed primarily of alkylnaphthale				
Distillates (coal tar), benzole fraction, distn. residues; Wash Oil; [A complex combination of hydrocarbons obtained from the distillation of crude benzole (high temperature coal tar). It may be a liquid with the approximate distillation range of 150 °C to 300 °C (302 °F to 572 °F) or a semi-solid or solid with a melting point	648-097-00-4	310-165-3	121620-46-0	J, M

up to 70 °C (158 °F). It is composed primarily of naphthalene and alkyl naphthalenes.]				
Anthracene oil, anthracene paste; Anthracene Oil Fraction; [The anthracene- rich solid obtained by the crystallization and centrifuging of anthracene oil. It is composed primarily of anthracene, carbazole and phenanthrene.		292-603-2	90640-81-6	J, M
Anthracene oil, anthracene- low; Anthracene Oil Fraction; [The oil remaining after the removal, by a crystallization process, of an anthracene- rich solid (anthracene paste) from anthracene oil. It is composed primarily of two, three	648-104-00-0	292-604-8	90640-82-7	J, M

and four membered aromatic compounds.]				
Residues (coal tar), anthracene oil distn.; Anthracene Oil Fraction; [The residue from the fraction distillation of crude anthracene boiling in the approximate range of 340 °C to 400 °C (644 °F to 752 °F). It consists predominantly of tri- and polynuclear aromatic and heterocyclic hydrocarbons.		295-505-8	92061-92-2	J, M
Anthracene oil, anthracene paste, anthracene fraction; Anthracene Oil Fraction; [A complex combination of hydrocarbons from the distillation of anthracene obtained by the crystallization of anthracene oil from bituminous high	648-106-00-1	295-275-9	91995-15-2	J, M

temperature tar and boiling in the range of 330 °C to 350 °C (626 °F to 662 °F). It contains chiefly anthracene, carbazole and phenanthrene.

anthracene paste, distn. lights; Anthracene Oil Fraction; [A complex combination of hydrocarbons from the distillation of anthracene obtained by crystallization of anthracene oil from bituminous				
high temperature tar and boiling in the range of approximately 290 °C to 340 °C (554 °F to 644 °F). It contains chiefly trinuclear aromatics and their dihydro derivatives.]				
Tar oils, coal, low-temp.; Tar Oil, high boiling; [A distillate from low- temperature coal tar. Composed primarily of hydrocarbons, phenolic compounds and aromatic nitrogen bases boiling in the range of	648-109-00-8	309-889-2	101316-87-4	J, M

approximately 160 °C to 340 °C (320 °F to 644 °F).]				
Extract residues (coal), low temp. coal tar alk.; [The residue from low temperature coal tar oils after an alkaline wash, such as aqueous sodium hydroxide, to remove crude coal tar acids. Composed primarily of hydrocarbons and aromatic nitrogen bases.]	648-110-00-3	310-191-5	122384-78-5	J, M
Phenols, ammonia liquor ext.; Alkaline Extract; [The combination of phenols extracted, using isobutyl acetate, from the ammonia liquor condensed from the gas evolved in low- temperature (less than 700 °C (1 292 °F)) destructive	648-111-00-9	284-881-9	84988-93-2	J, M

distillation of coal. It consists predominantly of a mixture of monohydric and dihydric phenols.]				
Distillates (coal tar), light oils, alk. exts.; Alkaline Extract; [The aqueous extract from carbolic oil produced by an alkaline wash such as aqueous sodium hydroxide. Composed primarily of the alkali salts of various phenolic compounds.]	648-112-00-4	292-610-0	90640-88-3	J, M
Extracts, coal tar oil alk.; Alkaline Extract; [The extract from coal tar oil produced by an alkaline wash such as aqueous sodium hydroxide. Composed primarily of the alkali salts of various phenolic compounds.]	648-113-00- X	266-017-2	65996-83-0	J, M

Distillates (coal tar), naphthalene oils, alk. exts.; Alkaline Extract; [The aqueous extract from naphthalene oil produced by an alkaline wash such as aqueous sodium hydroxide. Composed primarily of the alkali salts of various phenolic compounds.]	648-114-00-5	292-611-6	90640-89-4	J, M
Extract residues (coal), tar oil alk., carbonated, limed; Crude Phenols; [The product obtained by treatment of coal tar oil alkaline extract with CO <sub>2</sub> and CaO. Composed primarily of CaCO <sub>3</sub> , Ca(OH) <sub>2</sub> , Na <sub>2</sub> CO <sub>3</sub> and other organic and inorganic impurities.]	648-115-00-0	292-629-4	90641-06-8	J, M
Tar acids, coal, crude;	648-116-00-6	266-019-3	65996-85-2	J, M

Crude Phenols; [The reaction product obtained by neutralizing coal tar oil alkaline extract with an acidic solution, such as aqueous sulfuric acid, or gaseous carbon dioxide, to obtain the free acids. Composed primarily of tar acids such as phenol, cresols, and xylenols.]				
Tar acids, brown-coal, crude; Crude Phenols; [An acidified alkaline extract of brown coal tar distillate. Composed primarily of phenol and phenol homologs.]	648-117-00-1	309-888-7	101316-86-3	J, M
Tar acids, brown-coal gasification; Crude Phenols; [A complex combination of organic compounds obtained from brown coal	648-118-00-7	295-536-7	92062-22-1	J, M

gasification. Composed primarily of $C_{6-10}$ hydroxy aromatic phenols and their homologs.]				
Tar acids, distn. residues; Distillate Phenols; [A residue from the distillation of crude phenol from coal. It consists predominantly of phenols having carbon numbers in the range of $C_8$ through $C_{10}$ with a softening point of 60 °C to 80 °C (140 °F to 176 °F).]	648-119-00-2	306-251-5	96690-55-0	J, M
Tar acids, methylphenol fraction; Distillate Phenols; [The fraction of tar acid rich in 3- and 4- methylphenol, recovered by distillation of low- temperature coal tar crude tar acids.]	648-120-00-8	284-892-9	84989-04-8	J, M

Tar acids, polyalkylphen fraction; Distillate Phenols; [The fraction of tar acids, recovered by distillation of low- temperature coal tar crude tar acids, having an approximate boiling range of 225 °C to 320 °C (437 °F to 608 °F). Composed primarily of polyalkylphen		284-893-4	84989-05-9	J, M
Tar acids, xylenol fraction; Distillate Phenols; [The fraction of tar acids, rich in 2,4- and 2,5- dimethylphenor recovered by distillation of low- temperature coal tar crude tar acids.]	648-122-00-9	284-895-5	84989-06-0	J, M
Tar acids, ethylphenol fraction; Distillate Phenols; [The fraction of tar acids, rich in 3- and 4- ethylphenol, recovered by distillation	648-123-00-4	284-891-3	84989-03-7	J, M

of low- temperature coal tar crude tar acids.]				
Tar acids, 3,5-xylenol fraction; Distillate Phenols; [The fraction of tar acids, rich in 3,5- dimethylphenor recovered by distillation of low- temperature coal tar acids.]	648-124-00- X	284-896-0	84989-07-1	J, M
Tar acids, residues, distillates, first-cut; Distillate Phenols; [The residue from the distillation in the range of 235 °C to 355 °C (481 °F to 697 °F) of light carbolic oil.]	648-125-00-5	270-713-1	68477-23-6	J, M
Tar acids, cresylic, residues; Distillate Phenols; [The residue from crude coal tar acids after removal of phenol, cresols, xylenols and any higher boiling phenols. A black	648-126-00-0	271-418-0	68555-24-8	J, M

solid with a melting point approximately 80 °C (176 °F). Composed primarily of polyalkylphen resin gums, and inorganic salts.]	ols,	202,425,2	01070.47.0	
Phenols, C <sub>9-11</sub> ; Distillate Phenols	648-127-00-6	293-435-2	91079-47-9	J, M
Tar acids, cresylic; Distillate Phenols; [A complex combination of organic compounds obtained from brown coal and boiling in the range of approximately 200 °C to 230 °C (392 °F to 446 °F). It contains chiefly phenols and pyridine bases.]			92062-26-5	J, M
Tar acids, brown- coal, C <sub>2</sub> - alkylphenol fraction; Distillate Phenols; [The distillate from the acidification of alkaline washed	648-129-00-7	302-662-9	94114-29-1	J, M

lignite tar distillate boiling in the range of approximately 200 °C to 230 °C (392 °F to 446 °F). Composed primarily of m- and p- ethylphenol as well as cresols and xylenols.] Extract	648-130-00-2	292-623-1	90641-00-2	
Extract oils (coal), naphthalene oils; Acid Extract; [The aqueous extract produced by an acidic wash of alkali- washed naphthalene oil. Composed primarily of acid salts of various aromatic nitrogen bases including pyridine, quinoline and their alkyl derivatives.]	040-130-00-2	292-023-1	90041-00-2	J, M
Tar bases, quinoline derivs.; Distillate Bases	648-131-00-8	271-020-7	68513-87-1	J, M
Tar bases, coal, quinoline	648-132-00-3	274-560-1	70321-67-4	J, M

derivs. fraction; Distillate Bases				
Tar bases, coal, distn. residues; Distillate Bases; [The distillation residue remaining after the distillation of the neutralized, acid- extracted base- containing tar fractions obtained by the distillation of coal tars. It contains chiefly aniline, collidines, quinoline derivatives and toluidines.]	648-133-00-9	295-544-0	92062-29-8	J, M
Hydrocarbon oils, arom., mixed with polyethylene and polypropylene pyrolyzed, light oil fraction; Heat Treatment Products; [The oil obtained from the heat treatment	648-134-00-4	309-745-9	100801-63-6	J, M

of a polyethylene/ polypropylene mixture with coal tar pitch or aromatic oils. It consists predominantly of benzene and its homologs boiling in a range of approximately 70 °C to 120 °C (158 °F to 248 °F).]				
Hydrocarbon oils, arom., mixed with polyethylene, pyrolyzed, light oil fraction; Heat Treatment Products; [The oil obtained from the heat treatment of polyethylene with coal tar pitch or aromatic oils. It consists predominantly of benzene and its homologs boiling in a range of 70 °C to 120 °C (158 °F to 248 °F).]	648-135-00- X	309-748-5	100801-65-8	J, M
Hydrocarbon oils, arom., mixed with polystyrene,	648-136-00-5	309-749-0	100801-66-9	J, M

pyrolyzed, light oil fraction; Heat Treatment Products; [The oil obtained from the heat treatment of polystyrene with coal tar pitch or aromatic oils. It consists predominantly of benzene and its homologs boiling in a range of approximately 70 °C to 210 °C (158 °F to 410 °F).]				
Extract residues (coal), tar oil alk., naphthalene distn. residues; Naphthalene Oil Extract Residue; [The residue obtained from chemical oil extracted after the removal of naphthalene by distillation composed primarily of two to four membered condensed ring aromatic	648-137-00-0	277-567-8	73665-18-6	J, M

hydrocarbons and aromatic nitrogen bases.]				
Tar acids, cresylic, sodium salts, caustic solns.; Alkaline Extract	648-139-00-1	272-361-4	68815-21-4	J, M
Extract oils (coal), tar base; Acid Extract; [The extract from coal tar oil alkaline extract residue produced by an acidic wash such as aqueous sulfuric acid after distillation to remove naphthalene. Composed primarily of the acid salts of various aromatic nitrogen bases including pyridine, quinoline, and their alkyl derivatives.]	648-140-00-7	266-020-9	65996-86-3	J, M
Tar bases, coal, crude; Crude Tar Bases; [The reaction product obtained by neutralizing coal tar	648-141-00-2	266-018-8	65996-84-1	J, M

base extract oil with an alkaline solution, such as aqueous sodium hydroxide, to obtain the free bases. Composed primarily of such organic bases as acridine, phenanthridine pyridine, quinoline and their alkyl derivatives.]	<del>,</del>			
Light oil (coal), coke- oven; Crude benzole; [The volatile organic liquid extracted from the gas evolved in the high temperature (greater than 700 °C (1 292 °F)) destructive distillation of coal. Composed primarily of benzene, toluene, and xylenes. May contain other minor hydrocarbon constituents.]	648-147-00-5	266-012-5	65996-78-3	1
Distillates (coal), liq.	648-148-00-0	302-688-0	94114-52-0	J

solvent extn., primary; [The liquid product of condensation of vapors emitted during the digestion of coal in a liquid solvent and boiling in the range of approximately $30 \ ^{C}$ to $300 \ ^{C}$ ( $86 \ ^{F}$ to $572 \ ^{F}$ ). Composed primarily of partly hydrogenated condensed- ring aromatic hydrocarbons, aromatic compounds containing nitrogen, oxygen and sulfur, and their alkyl derivatives having carbon numbers predominantly in the range of C <sub>4</sub> through C <sub>14</sub> .]				
Distillates (coal), solvent extn., hydrocracked; [Distillate obtained by hydrocracking of coal extract or solution produced by	648-149-00-6	302-689-6	94114-53-1	J

the liquid solvent extraction or supercritical gas extraction processes and boiling in the range of approximately 30 °C to 300 °C (86 °F to 572 °F). Composed primarily of aromatic, hydrogenated aromatic and naphthenic compounds, their alkyl derivatives and alkanes with earbon				
and alkanes with carbon numbers predominantly in the range of $C_4$ through $C_{14}$ . Nitrogen, sulfur and oxygen- containing aromatic and hydrogenated				
aromatic compounds are also present.]				
Naphtha (coal), solvent extn., hydrocracked; [Fraction of the distillate obtained by hydrocracking of coal extract or solution	648-150-00-1	302-690-1	94114-54-2	J

hydrocracked middle distillate from coal extract or solution produced by the liquid solvent extraction or supercritical gas extraction processes and boiling in the range of approximately $180 \degree C$ to $280 \degree C$ ( $356 \degree F$ to $536 \degree F$ ). Composed primarily of hydrogenated two- ring carbon compounds and their alkyl derivatives having carbon numbers predominantly in the range of C <sub>9</sub> through C <sub>14</sub> .]				
Light oil (coal), semi- coking process; Fresh oil; [The volatile organic liquid condensed from the gas evolved in the low- temperature (less than	648-156-00-4	292-635-7	90641-11-5	J

700 °C (1 292 °F)) destructive distillation of coal. Composed primarily of $C_{6-10}$ hydrocarbons.	]			
Hydrocarbons C <sub>4</sub> , 1,3- butadiene- and isobutene- free; Petroleum gas	,649-118-00- X	306-004-1	95465-89-7	K
Gasoline, natural; Low boiling point naphtha; [A complex combination of hydrocarbons separated from natural gas by processes such as refrigeration or absorption. It consists predominantly of saturated aliphatic hydrocarbons having carbon numbers predominantly in the range of C <sub>4</sub> through C <sub>8</sub> and boiling in the range of approximately minus 20 °C		232-349-1	8006-61-9	P

to 120 °C (- 4 °F to 248 °F).]				
Naphtha; Low boiling point naphtha; [Refined, partly refined, or unrefined petroleum products produced by the distillation of natural gas. It consists of hydrocarbons having carbon numbers predominantly in the range of $C_5$ through $C_6$ and boiling in the range of approximately 100 °C to 200 °C (212 °F to 392 °F).]			8030-30-6	P
Ligroine; Low boiling point naphtha; [A complex combination of hydrocarbons obtained by the fractional distillation of petroleum. This fraction boils in a range of approximately 20 °C to 135 °C	649-263-00-9	232-453-7	8032-32-4	Р

(58 °F to 275 °F).]				
Naphtha (petroleum), heavy straight-run; Low boiling point naphtha; [A complex combination of hydrocarbons produced by distillation of crude oil. It consists of hydrocarbons having carbon numbers predominantly in the range of $C_6$ through $C_{12}$ and boiling in the range of approximately $65 \ ^{\circ}$ C to 230 $^{\circ}$ C (149 $^{\circ}$ F to 446 $^{\circ}$ F).]			64741-41-9	P
Naphtha (petroleum), full-range straight-run; Low boiling point naphtha; [A complex combination of hydrocarbons produced by distillation of crude oil. It consists of hydrocarbons having carbon numbers	649-265-00- X	265-042-6	64741-42-0	P

predominantly in the range of $C_4$ through $C_{11}$ and boiling in the range of approximately -20 °C to 220 °C (-4 °F to 428 °F).]				
Naphtha (petroleum), light straight- run; Low boiling point naphtha; [A complex combination of hydrocarbons produced by distillation of crude oil. It consists predominantly of aliphatic hydrocarbons having carbon numbers predominantly in the range of $C_4$ through $C_{10}$ and boiling in the range of approximately -20 °C to 180 °C (-4 °F to 356 °F).]		265-046-8	64741-46-4	P
Solvent naphtha (petroleum), light aliph.;	649-267-00-0	265-192-2	64742-89-8	Р

Low boiling point naphtha; [A complex combination of hydrocarbons obtained from the distillation of crude oil or natural gasoline. It consists predominantly of saturated hydrocarbons having carbon numbers predominantly in the range of $C_5$ through $C_{10}$ and boiling in the range of approximately $35 \ ^{\circ}C$ to $160 \ ^{\circ}C$ ( $95 \ ^{\circ}F$ to $320 \ ^{\circ}F$ .]				
Distillates (petroleum), straight-run light; Low boiling point naphtha; [A complex combination of hydrocarbons produced by the distillation of crude oil. It consists of hydrocarbons having carbon numbers	649-268-00-6	270-077-5	68410-05-9	Р

predominantly in the range of $C_2$ through $C_7$ and boiling in the range of approximately $- 88 \ ^{\circ}C$ to 99 $^{\circ}C$ $(- 127 \ ^{\circ}F$ to $210 \ ^{\circ}F).]$				
Gasoline, vapour- recovery; Low boiling point naphtha; [A complex combination of hydrocarbons separated from the gases from vapour recovery systems by cooling. It consists of hydrocarbons having carbon numbers predominantly in the range of C <sub>4</sub> through C <sub>11</sub> and boiling in the range of approximately -20 °C to 196 °C( $-4$ °F to 384 °F).]		271-025-4	68514-15-8	P
Gasoline, straight-run, topping- plant;	649-270-00-7	271-727-0	68606-11-1	Р

Low boiling point naphtha; [A complex combination of hydrocarbons produced from the topping plant by the distillation of crude oil. It boils in the range of approximately 36,1 °C to 193,3 °C (97 °F to 380 °F).]			
Naphtha (petroleum), unsweetened; Low boiling point naphtha; [A complex combination of hydrocarbons produced from the distillation of naphtha streams from various refinery processes. It consists of hydrocarbons having carbon numbers predominantly in the range of C <sub>5</sub> through C <sub>12</sub> and boiling in the range of approximately 0 °C to	272-186-3	68783-12-0	Р

230 °C (25 °F to 446 °F).]				
Distillates (petroleum), light straight- run gasoline fractionation stabilizer overheads; Low boiling point naphtha; [A complex combination of hydrocarbons obtained by the fractionation of light straight-run gasoline. It consists of saturated aliphatic hydrocarbons having carbon numbers predominantly in the range of C <sub>3</sub> through C <sub>6</sub> .]			68921-08-4	P
Naphtha (petroleum), heavy straight run, aromcontg.; Low boiling point naphtha; [A complex combination of hydrocarbons obtained from a distillation process of crude petroleum.	649-273-00-3	309-945-6	101631-20-3	P

It consists predominantly of hydrocarbons having carbon numbers in the range of $C_8$ through $C_{12}$ and boiling in the range of approximately 130 °C to 210 °C (266 °F to 410 °F).]				
Naphtha (petroleum), full-range alkylate; Low boiling point modified naphtha; [A complex combination of hydrocarbons produced by distillation of the reaction products of isobutane with monoolefinic hydrocarbons usually ranging in carbon numbers from C <sub>3</sub> through C <sub>5</sub> . It consists of predominantly branched chain saturated hydrocarbons having carbon numbers	649-274-00-9	265-066-7	64741-64-6	P

predominantly in the range of C <sub>7</sub> through C <sub>12</sub> and boiling in the range of approximately 90 °C to 220 °C (194 °F to 428 °F).]			
Naphtha (petroleum), heavy alkylate; Low boiling point modified naphtha; [A complex combination of hydrocarbons produced by distillation of the reaction products of isobutane with monoolefinic hydrocarbons usually ranging in carbon numbers from $C_3$ to $C_5$ . It consists of predominantly branched chain saturated hydrocarbons having carbon numbers predominantly in the range of $C_9$ through $C_{12}$ and	265-067-2	64741-65-7	P

boiling in the range of approximately 150 °C to 220 °C (302 °F to 428 °F).]	,			
Naphtha (petroleum), light alkylate; Low boiling point modified naphtha; [A complex combination of hydrocarbons produced by distillation of the reaction products of isobutane with monoolefinic hydrocarbons usually ranging in carbon numbers from C <sub>3</sub> through C <sub>5</sub> . It consists of predominantly branched chain saturated hydrocarbons having carbon numbers predominantly branched chain saturated hydrocarbons having carbon numbers predominantly in the range of C <sub>7</sub> through C <sub>10</sub> and boiling in the range of approximately 90 °C to 160 °C		265-068-8	64741-66-8	P

(194 °F to 320 °F).]				
Naphtha (petroleum), isomerization; Low boiling point modified naphtha; [A complex combination of hydrocarbons obtained from catalytic isomerization of straight chain paraffinic C <sub>4</sub> through C <sub>6</sub> hydrocarbons. It consists predominantly of saturated hydrocarbons such as isobutane, isopentane, 2,2- dimethylbutan 2- methylpentane	e, , ;, ;.]		64741-70-4	P
Naphtha (petroleum), solvent- refined light; Low boiling point modified naphtha; [A complex combination of hydrocarbons obtained as the raffinate from a solvent extraction	649-278-00-0	265-086-6	64741-84-0	Р

process. It consists predominantly of aliphatic hydrocarbons having carbon numbers predominantly in the range of $C_5$ through $C_{11}$ and boiling in the range of approximately 35 °C to 190 °C (95 °F to 374 °F).]			
Naphtha (petroleum), solvent- refined heavy; Low boiling point modified naphtha; [A complex combination of hydrocarbons obtained as the raffinate from a solvent extraction process. It consists predominantly of aliphatic hydrocarbons having carbon numbers predominantly in the range of C <sub>7</sub> through C <sub>12</sub> and boiling in	265-095-5	64741-92-0	Р

the range of approximately 90 °C to 230 °C (194 °F to 446 °F).]				
Raffinates (petroleum), catalytic reformer ethylene glycol-water countercurrent exts.; Low boiling point modified naphtha; [A complex combination of hydrocarbons obtained as the raffinate from the UDEX extraction process on the catalytic reformer stream. It consists of saturated hydrocarbons having carbon numbers predominantly in the range of C <sub>6</sub> through C <sub>9</sub> .]			68410-71-9	P
Raffinates (petroleum), reformer, Lurgi unit- sepd.; Low boiling point modified naphtha; [The complex	649-281-00-7	270-349-3	68425-35-4	P

combination of hydrocarbons obtained as a raffinate from a Lurgi separation unit. It consists predominantly of non- aromatic hydrocarbons with various small amounts of aromatic hydrocarbons having carbon numbers predominantly in the range of C <sub>6</sub> through C <sub>8</sub> .]				
Naphtha (petroleum), full-range alkylate, butane- contg.; Low boiling point modified naphtha; [A complex combination of hydrocarbons produced by the distillation of the reaction products of isobutane with monoolefinic hydrocarbons usually ranging in carbon numbers	649-282-00-2	271-267-0	68527-27-5	P

from $C_3$ through $C_5$ . It consists of predominantly branched chain saturated hydrocarbons having carbon numbers predominantly in the range of $C_7$ through $C_{12}$ with some butanes and boiling in the range of approximately $35 \ ^{\circ}C$ to $200 \ ^{\circ}C$ $(95 \ ^{\circ}F$ to $428 \ ^{\circ}F)$ .]				
Distillates (petroleum), naphtha steam cracking- derived, solvent- refined light hydrotreated; Low boiling point modified naphtha; [A complex combination of hydrocarbons obtained as the raffinates from a solvent extraction process of hydrotreated light distillate from steam-	649-283-00-8	295-315-5	91995-53-8	Р

cracked naphtha.]				
Naphtha (petroleum), $C_{4-12}$ butane- alkylate, isooctane- rich; Low boiling point modified naphtha; [A complex combination of hydrocarbons obtained by alkylation of butanes. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of $C_4$ through $C_{12}$ , rich in isooctane, and boiling in the range of approximately $35 \ ^{\circ}C$ to $210 \ ^{\circ}C$ (95 $^{\circ}F$ to $410 \ ^{\circ}F$ ).]			92045-49-3	P
Hydrocarbons hydrotreated light naphtha distillates, solvent- refined; Low boiling point modified naphtha;	,649-285-00-9	295-436-3	92045-55-1	Ρ

[A combination of hydrocarbons obtained from the distillation of hydrotreated naphtha followed by a solvent extraction and distillation process. It consists predominantly of saturated hydrocarbons boiling in the range of approximately 94 °C to 99 °C (201 °F to 210 °F).]			
Naphtha (petroleum), isomerization, C <sub>6</sub> -fraction; Low boiling point modified naphtha; [A complex combination of hydrocarbons obtained by distillation of a gasoline which has been catalytically isomerized. It consists predominantly of hexane isomers boiling in the range of approximately	295-440-5	92045-58-4	P

It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of $C_5$ through $C_{12}$ and boiling in the range of approximately $35 \ ^{\circ}C$ to $230 \ ^{\circ}C$				
(95 °F to 446 °F).] Naphtha (petroleum), light steam- cracked; Low boiling point naphtha - unspecified; [A complex combination of hydrocarbons obtained by the distillation of the products from a steam cracking process. It consists predominantly	649-355-00-9	265-187-5	64742-83-2	P

of unsaturated hydrocarbons having carbon numbers predominantly in the range of $C_4$ through $C_{11}$ and boiling in the range of approximately minus 20 °C to 190 °C (-4 °F to 374 °F). This stream is likely to contain 10 vol. % or more benzene.]			
Solvent naphtha (petroleum), light arom.; Low boiling point naphtha - unspecified; [A complex combination of hydrocarbons obtained from distillation of aromatic streams. It consists predominantly of aromatic hydrocarbons having carbon numbers predominantly in the range of $C_8$ through	265-199-0	64742-95-6	P

$C_{10}$ and boiling in the range of approximately 135 °C to 210 °C (275 °F to 410 °F).]				
Aromatic hydrocarbons, C <sub>6-10</sub> , acid- treated, neutralized; Low boiling point naphtha - unspecified	649-357-00- X	268-618-5	68131-49-7	Р
Distillates (petroleum), C <sub>3-5</sub> , 2- methyl-2- butene-rich; Low boiling point naphtha - unspecified; [A complex combination of hydrocarbons from the distillation of hydrocarbons usually ranging in carbon numbers from C <sub>3</sub> through C <sub>5</sub> , predominantly isopentane and 3- methyl-1- butene. It consists of saturated and unsaturated hydrocarbons having carbon numbers	649-358-00-5	270-725-7	68477-34-9	Р

in the range of C <sub>3</sub> through C <sub>5</sub> , predominantly 2-methyl-2- butene.]				
Distillates (petroleum), polymd. steam- cracked petroleum distillates, C <sub>5-12</sub> fraction; Low boiling point naphtha - unspecified; [A complex combination of hydrocarbons obtained from the distillation of polymerized steam- cracked petroleum distillate. It consists predominantly of	649-359-00-0	270-735-1	68477-50-9	P
hydrocarbons having carbon numbers predominantly in the range of $C_5$ through $C_{12}$ .]				
Distillates (petroleum), steam- cracked, C <sub>5-12</sub> fraction; Low boiling point	649-360-00-6	270-736-7	68477-53-2	Р

naphtha - unspecified; [A complex combination of organic compounds obtained by the distillation of products from a steam cracking process. It consists of unsaturated hydrocarbons having carbon numbers predominantly in the range of C <sub>5</sub> through C <sub>12</sub> .]				
Distillates (petroleum), steam- cracked, $C_{5-10}$ fraction, mixed with light steam- cracked petroleum naphtha $C_5$ fraction; Low boiling point naphtha - unspecified	649-361-00-1	270-738-8	68477-55-4	Р
Extracts (petroleum), cold-acid, C <sub>4-6</sub> ; Low boiling point naphtha - unspecified; [A complex combination of organic compounds	649-362-00-7	270-741-4	68477-61-2	P

produced by cold acid unit extraction of saturated and unsaturated aliphatic hydrocarbons usually ranging in carbon numbers from C <sub>3</sub> through C <sub>6</sub> , predominantly pentanes and amylenes. It consists predominantly of saturated and unsaturated hydrocarbons having carbon numbers in the range of C <sub>4</sub> through C <sub>6</sub> , predominantly				
C <sub>5</sub> .] Distillates (petroleum), depentanizer overheads; Low boiling point naphtha - unspecified; [A complex combination of hydrocarbons obtained from a catalytic cracked gas stream. It consists of aliphatic hydrocarbons having carbon	649-363-00-2	270-771-8	68477-89-4	Р

numbers predominantly in the range of C <sub>4</sub> through C <sub>6</sub> .]				
Residues (petroleum), butane splitter bottoms; Low boiling point naphtha - unspecified; [A complex residuum from the distillation of butane stream. It consists of aliphatic hydrocarbons having carbon numbers predominantly in the range of C <sub>4</sub> through C <sub>6</sub> .]			68478-12-6	Р
Residual oils (petroleum), deisobutanizen tower; Low boiling point naphtha - unspecified; [A complex residuum from the atmospheric distillation of the butane- butylene stream. It consists of aliphatic hydrocarbons having carbon	649-365-00-3	270-795-9	68478-16-0	P

numbers predominantly in the range of C <sub>4</sub> through C <sub>6</sub> .]				
Naphtha (petroleum), full-range coker; Low boiling point naphtha - unspecified; [A complex combination of hydrocarbons produced by the distillation of products from a fluid coker. It consists predominantly of unsaturated hydrocarbons having carbon numbers predominantly in the range of C <sub>4</sub> through C <sub>15</sub> and boiling in the range of approximately 43 °C to 250 °C (110 °F-500 °]		270-991-4	68513-02-0	P
Naphtha (petroleum), steam- cracked middle arom.; Low boiling point	649-367-00-4	271-138-9	68516-20-1	Ρ

naphtha - unspecified; [A complex combination of hydrocarbons produced by the distillation of products from a steam- cracking process. It consists predominantly of aromatic hydrocarbons having carbon numbers predominantly in the range of $C_7$ through $C_{12}$ and boiling in the range of approximately 130 °C to 220 °C (266 °F to 428 °F).]				
Naphtha (petroleum), clay-treated full-range straight-run; Low boiling point naphtha - unspecified; [A complex combination of hydrocarbons resulting from treatment of full-range straight-run naphtha with	649-368-00- X	271-262-3	68527-21-9	P

natural or modified clay, usually in a percolation process to remove the trace amounts of polar compounds and impurities present. It consists of hydrocarbons having carbon numbers predominantly in the range of $C_4$ through $C_{11}$ and boiling in the range of approximately – 20 °C to 220 °C				
(-4 °F to 429 °F).] Naphtha (petroleum), clay-treated light straight- run; Low boiling point naphtha - unspecified; [A complex combination of hydrocarbons resulting from treatment of light straight-run naphtha with a natural or modified	649-369-00-5	271-263-9	68527-22-0	P

clay, usually in a percolation process to remove the trace amounts of polar compounds and impurities present. It consists of hydrocarbons having carbon numbers predominantly in the range of C <sub>7</sub> through C <sub>10</sub> and boiling in the range of approximately 93 °C to 180 °C (200 °F to 356 °F).]				
Naphtha (petroleum), light steam- cracked arom.; Low boiling point naphtha - unspecified; [A complex combination of hydrocarbons produced by distillation of products from a steam- cracking process. It consists predominantly of aromatic	649-370-00-0	271-264-4	68527-23-1	Р

hydrocarbons having carbon numbers predominantly in the range of $C_7$ through $C_9$ and boiling in the range of approximately 110 °C to 165 °C (230 °F to 329 °F).]			
Naphtha (petroleum), light steam- cracked, debenzenized; Low boiling point naphtha - unspecified; [A complex combination of hydrocarbons produced by distillation of products from a steam- cracking process. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C <sub>4</sub> through C <sub>12</sub> and boiling in the range of approximately 80 °C to	271-266-5	68527-26-4	Ρ

218 °C (176 °F to 424 °F).]				
Naphtha (petroleum), aromcontg.; Low boiling point naphtha - unspecified	649-372-00-1	271-635-0	68603-08-7	Р
Gasoline, pyrolysis, debutanizer bottoms; Low boiling point naphtha - unspecified; [A complex combination of hydrocarbons obtained from the fractionation of depropanizer bottoms. It consists of hydrocarbons having carbon numbers predominantly greater than $C_5$ .]			68606-10-0	Р
Naphtha (petroleum), light, sweetened; Low boiling point naphtha - unspecified; [A complex combination of hydrocarbons obtained by subjecting a petroleum	649-374-00-2	272-206-0	68783-66-4	P

distillate to a sweetening process to convert mercaptans or to remove acidic impurities. It consists predominantly of saturated and unsaturated hydrocarbons having carbon numbers predominantly in the range of $C_3$ through $C_6$ and boiling in the range of approximately $- 20 \ ^{\circ}C$ to 100 $^{\circ}C$ $(-4 \ ^{\circ}F$ to 212 \ ^{\circ}F).]				
Natural gas condensates; Low boiling point naphtha - unspecified; [A complex combination of hydrocarbons separated and/or condensed from natural gas during transportation and collected at the wellhead and/or from the production, gathering,	649-375-00-8	272-896-3	68919-39-1	J

transmission, and distribution pipelines in deeps, scrubbers, etc. It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C <sub>2</sub> through C <sub>8</sub> .]				
Distillates (petroleum), naphtha unifiner stripper; Low boiling point naphtha - unspecified; [A complex combination of hydrocarbons produced by stripping the products from the naphtha unifiner. It consists of saturated aliphatic hydrocarbons having carbon numbers predominantly in the range of C <sub>2</sub> through C <sub>6</sub> .]			68921-09-5	P
Naphtha (petroleum), catalytic	649-377-00-9	285-510-3	85116-59-2	Р

reformed light, arom free fraction; Low boiling point naphtha - unspecified; [A complex combination of hydrocarbons remaining after removal of aromatic compounds from catalytic reformed light naphtha in a selective absorption process. It consists predominantly of paraffinic and cyclic compounds having carbon numbers predominantly in the range of $C_5$ to $C_8$ and boiling in the range of approximately 66 °C to 121 °C (151 °F to 250 °F).]				
Gasoline; Low boiling point naphtha - unspecified; [A complex combination of hydrocarbons consisting primarily of	649-378-00-4	289-220-8	86290-81-5	Р

paraffins, cycloparaffins aromatic and olefinic hydrocarbons having carbon numbers predominantly greater than C <sub>3</sub> and boiling in the range of 30 °C to 260 °C (86 °F to 500 °F).]				
Aromatic hydrocarbons, C <sub>7-8</sub> , dealkylation products, distn. residues; Low boiling point naphtha - unspecified	649-379-00- X	292-698-0	90989-42-7	Р
Hydrocarbons C <sub>4-6</sub> , depentanizer lights, arom. hydrotreater; Low boiling point naphtha - unspecified; [A complex combination of hydrocarbons obtained as first runnings from the depentanizer column before hydrotreatmen of the aromatic charges.	,649-380-00-5 t	295-298-4	91995-38-9	P

It consists predominantly of hydrocarbons having carbon numbers predominantly in the range of C <sub>4</sub> through C <sub>6</sub> , predominantly pentanes and pentenes, and boiling in the range of approximately 25 °C to 40 °C (77 °F to 104 °F).]				
Distillates (petroleum), heat-soaked steam- cracked naphtha, $C_5$ - rich; Low boiling point naphtha - unspecified; [A complex combination of hydrocarbons obtained by distillation of heat-soaked steam- cracked naphtha. It consists predominantly of hydrocarbons having carbon numbers in the range of C <sub>4</sub> through C <sub>6</sub> ,	649-381-00-0	295-302-4	91995-41-4	Ρ

predominantly C <sub>5</sub> .]	L			
Extracts (petroleum), catalytic reformed light naphtha solvent; Low boiling point naphtha - unspecified; [A complex combination of hydrocarbons obtained as the extract from the solvent extraction of a catalytically reformed petroleum cut. It consists predominantly of aromatic hydrocarbons having carbon numbers predominantly in the range of $C_7$ through $C_8$ and boiling in the range of approximately 100 °C to 200 °C (212 °F to 392 °F).] Naphtha		295-331-2	91995-68-5	Р
