

Commission Implementing Regulation (EU) No 1358/2014 of 18 December 2014 amending Regulation (EC) No 889/2008 laying down detailed rules for the implementation of Council Regulation (EC) No 834/2007 as regards the origin of organic aquaculture animals, aquaculture husbandry practices, feed for organic aquaculture animals and products and substances allowed for use in organic aquaculture (Text with EEA relevance)

COMMISSION IMPLEMENTING REGULATION (EU) No 1358/2014

of 18 December 2014

amending Regulation (EC) No 889/2008 laying down detailed rules for the implementation of Council Regulation (EC) No 834/2007 as regards the origin of organic aquaculture animals, aquaculture husbandry practices, feed for organic aquaculture animals and products and substances allowed for use in organic aquaculture

(Text with EEA relevance)

THE EUROPEAN COMMISSION,

Having regard to the Treaty on the Functioning of the European Union,

Having regard to Council Regulation (EC) No 834/2007 of 28 June 2007 on organic production and labelling of organic products and repealing Regulation (EEC) No 2092/91⁽¹⁾ and in particular Articles 13(3), 15(2) and 16(1) thereof,

Whereas:

- (1) Regulation (EC) No 834/2007 establishes basic requirements for the organic production of seaweed and aquaculture animals. Detailed rules for the implementation of those requirements are laid down in Commission Regulation (EC) No 889/2008⁽²⁾.
- (2) In the period between November 2012 and April 2013, certain Member States requested the revision of rules relating to products, substances, feed sources and techniques authorised to be used in organic aquaculture production. Those requests have been evaluated by the expert group for technical advice on organic production (EGTOP) set up by Commission Decision 2009/427/EC⁽³⁾. Taking into account the EGTOP's opinion, the Commission has identified a need to update and integrate the existing rules for the implementation of the requirements for the organic production of seaweed and aquaculture animals.
- (3) Under Article 15(1)(a)(ii) of Regulation (EC) No 834/2007, non-organically produced animals may be brought onto a holding under specific conditions, when young stock from organic broodstock or holdings are not available. Regulation (EC) No 889/2008 lays down the specific restrictions as regards wild caught aquaculture animals, including the collection of wild aquaculture juveniles. Some traditional practices of extensive fish farming in wetlands, such as brackish water ponds, tidal areas and costal lagoons, closed by levees and banks, have existed for centuries and are valuable in terms of cultural

Changes to legislation: There are currently no known outstanding effects for the Commission Implementing Regulation (EU) No 1358/2014, Introductory Text. (See end of Document for details)

heritage, biodiversity conservation and economic perspective for the local communities. Under certain conditions, those practices do not affect the stock status of the species concerned.

- (4) Therefore, the collection of wild fry for on-growing purposes in those traditional aquaculture practices is considered to be in line with the objectives, criteria and principles of organic aquaculture production, provided that management measures approved by the relevant authority in charge of the management of the fish stocks in question are in place to ensure the sustainable exploitation of the species concerned, that restocking is in line with those measures, and that the fish are fed exclusively with feed naturally available in the environment.
- (5) The EGTOP expressed concern that the sources of feed and additives allowed in organic aquaculture production do not sufficiently meet the dietary requirements of carnivorous fish species. According to Article 15(1)(d)(i) of Regulation (EC) No 834/2007, animals are to be fed with feed that meets their nutritional requirements at the various stages of their development. Therefore the use of whole fish as a source of feed for carnivorous animals in organic aquaculture should be allowed. However, that should not result in additional pressure on endangered or overfished stocks. For that reason, only fisheries products certified as sustainable by a third party should be used to produce feed for carnivorous animals in organic aquaculture. In that context, the credibility of the sustainability scheme used is important to reassure consumers of the overall sustainability of the organic aquaculture product. Therefore, competent authorities should identify the certification schemes which they consider, in light of the principles of sustainable fisheries laid down in Regulation (EU) No 1380/2013 of the European Parliament and of the Council⁽⁴⁾, adequate to demonstrate the sustainability of fisheries products for use as feed in organic aquaculture. The 2009 FAO's Guidelines for the ecolabelling of fish and fisheries products from marine capture fisheries⁽⁵⁾ may be used as a reference when assessing the suitability of certification schemes.
- (6) The EGTOP also highlighted the need to provide a sufficient amount of histidine in the diet of salmonid fish, to ensure a high level of animal health and welfare in this species. Taking into account the significant variations in the histidine contents in marine raw materials according to species and season, as well as to the production, processing and storage conditions, the use of histidine produced from fermentation should be allowed to ensure that the dietary requirements of salmonid fish are met.
- (7) The maximum amount of fishmeal currently allowed in feed for shrimps is not sufficient to meet their dietary needs and should therefore be increased. When needed to meet the quantitative dietary requirements, the supplementation of feed with cholesterol should also be allowed, in line with the recommendations of the EGTOP report. To that aim, organic cholesterol should be used if available. Cholesterol derived from wool, shellfish or other sources may also be used when organic cholesterol is not available.
- (8) The exemption provided in paragraph 2 of Article 25k expires on 31 December 2014; that paragraph should therefore be deleted.
- (9) In order to ensure compliance with Article 15(1)(a) of Regulation (EC) No 834/2007 in relation to the rearing of young stock originating from organic broodstock and organic

holdings, it is considered necessary, and in line with the EGTOP report, to introduce specific rules for the use of plankton in the feeding of organic juveniles. Plankton is necessary for the rearing of juveniles and it is not produced under organic rules.

- (10) The EGTOP also advised to update the list of substances allowed for cleaning and disinfection in organic aquaculture, in particular in relation to the possibility of using some of the substances already listed also in the presence of animals. Annex VII to Regulation (EC) No 889/2008 should be amended accordingly.
- (11) The scope of Annex XIIIa to Regulation (EC) No 889/2008, as defined in Article 25f(2), should be more clearly defined, in particular in relation to husbandry practices.
- (12) The maximum allowed stocking density for arctic charr should be increased, to better accommodate this species' needs. Maximum stocking densities should also be defined for crayfish. Annex XIIIa to Regulation (EC) No 889/2008 should be amended accordingly.
- (13) Regulation (EC) No 889/2008 should therefore be amended accordingly.
- (14) The measures provided for in this Regulation are in accordance with the opinion of the regulatory Committee on organic production,

HAS ADOPTED THIS REGULATION:
