

Commission Regulation (EU) 2020/772 of 11 June 2020 amending Annexes I, VII and VIII to Regulation (EC) No 999/2001 of the European Parliament and of the Council as regards eradication measures for transmissible spongiform encephalopathies in goats and endangered breeds (Text with EEA relevance)

COMMISSION REGULATION (EU) 2020/772

of 11 June 2020

amending Annexes I, VII and VIII to Regulation (EC) No 999/2001 of the European Parliament and of the Council as regards eradication measures for transmissible spongiform encephalopathies in goats and endangered breeds

(Text with EEA relevance)

THE EUROPEAN COMMISSION,

Having regard to the Treaty on the Functioning of the European Union,

Having regard to Regulation (EC) No 999/2001 of the European Parliament and of the Council of 22 May 2001 laying down rules for the prevention, control and eradication of certain transmissible spongiform encephalopathies⁽¹⁾, and in particular the first paragraph of Article 23 and Article 23a(m) thereof,

Whereas:

- (1) Regulation (EC) No 999/2001 lays down rules for the prevention, control and eradication of transmissible spongiform encephalopathies (TSEs) in animals.
- (2) Chapter B of Annex VII to that Regulation lays down the measures to be undertaken following the confirmation of the presence of a case of TSE in bovine, ovine and caprine animals. When a classical scrapie case is confirmed in an ovine or caprine animal, the holding is to be subject to the conditions set out in one of the three options provided in point 2.2.2 of Chapter B of Annex VII.
- (3) Option 2 requires the killing and complete destruction of all ovine and caprine animals of the holding except those ovine animals having a prion protein genotype that is resistant to classical scrapie.
- (4) On 5 July 2017, the European Food Safety Authority (EFSA) adopted a scientific opinion⁽²⁾ on the genetic resistance to TSE in goats. According to the EFSA opinion, field and experimental data are robust enough to conclude that the K222, D146 and S146 alleles confer genetic resistance against classical scrapie strains known to occur naturally in the EU goat population. The EFSA opinion concludes that outbreak management for classical scrapie in goat herds could be based on the selection of genetically resistant animals, in a similar way as currently laid down in Regulation (EC) No 999/2001 for ovine animals.
- (5) It is therefore appropriate to amend Chapter B of Annex VII to Regulation (EC) No 999/2001 in order to introduce the possibility to restrict the killing and destruction of

Changes to legislation: There are currently no known outstanding effects for the Commission Regulation (EU) 2020/772. (See end of Document for details)

caprine animals to only those which are susceptible to classical scrapie. The Member States should determine in each case which animals should be exempted from killing and destruction in accordance with their genetic resistance to the disease.

- (6) The EFSA opinion highlights that while breeding for resistance can be an effective tool for controlling classical scrapie in goats, given the low frequencies of presence of these alleles in most breeds, high selection pressure would likely have an adverse effect on genetic diversity. The opinion therefore recommends that measures to build up genetic resistance in a caprine population be adopted at Member State level depending on the breed concerned⁽³⁾. The Member States should therefore be able to design their breeding strategy based on the frequency of presence of alleles conferring genetic resistance against classical scrapie in their goat population.
- (7) Following EFSA recommendation, in the event of a scrapie outbreak in a holding keeping goats, the Member States should decide, based on the breeding strategy, the particular measures which should be implemented in order to build up the genetic resistance in the caprine population of that holding.
- (8) Council Directive 89/361/EEC⁽⁴⁾ has been repealed by Regulation (EU) 2016/1012 of the European Parliament and of the Council⁽⁵⁾ as from 1 November 2018. That Regulation, in its Article 2(24), lays down a definition for ‘endangered breed’, which means a local breed, recognised by a Member State to be endangered, genetically adapted to one or more traditional production systems or environments in that Member State and where the endangered status is scientifically established by a body possessing the necessary skills and knowledge in the area of endangered breeds.
- (9) It is therefore appropriate to amend point 1 of Annex I to Regulation (EC) No 999/2001 accordingly and to replace, in Chapter B of Annex VII and Chapter A of Annex VIII to that Regulation, the references to Directive 89/361/EEC with references to Regulation (EU) 2016/1012 and the expression ‘local breed in danger of being lost to farming’ as laid down in Article 7(2) and (3) of Commission Delegated Regulation (EU) No 807/2014⁽⁶⁾ with the expression ‘endangered breed’ as defined in Article 2(24) of Regulation (EU) 2016/1012.
- (10) Annexes I, VII and VIII to Regulation (EC) No 999/2001 should therefore be amended accordingly.
- (11) The measures provided for in this Regulation are in accordance with the opinion of the Standing Committee on Plants, Animals, Food and Feed,

HAS ADOPTED THIS REGULATION:

Article 1

Annexes I, VII and VIII to Regulation (EC) No 999/2001 are amended in accordance with the Annex to this Regulation.

Article 2

This Regulation shall enter into force on the twentieth day following that of its publication in the *Official Journal of the European Union*.

Changes to legislation: There are currently no known outstanding effects for the Commission Regulation (EU) 2020/772. (See end of Document for details)

This Regulation shall be binding in its entirety and directly applicable in all Member States.

Done at Brussels, 11 June 2020.

For the Commission

The President

Ursula VON DER LEYEN

Changes to legislation: There are currently no known outstanding effects for the Commission Regulation (EU) 2020/772. (See end of Document for details)

ANNEX

Annexes I, VII and VIII to Regulation (EC) No 999/2001 are amended as follows:

- (1) in Annex I, point 1 is amended as follows:
- (a) the introductory sentence is replaced by the following:
 - 1. For the purpose of this Regulation, the following definitions set out in Regulation (EC) No 1069/2009 of the European Parliament and of the Council⁽⁷⁾, Commission Regulation (EU) No 142/2011⁽⁸⁾, Regulation (EC) No 178/2002 of the European Parliament and of the Council⁽⁹⁾, Regulation (EC) No 767/2009 of the European Parliament and of the Council⁽¹⁰⁾, Council Directive 2006/88/EC⁽¹¹⁾ and Regulation (EU) 2016/1012 of the European Parliament and of the Council⁽¹²⁾ shall apply.;
 - (b) the following point (f) is added:
 - (f) the definition of “endangered breed” in Article 2(24) of Regulation (EU) 2016/1012.;
- (2) in Annex VII, Chapter B is amended as follows:
- (a) in point 2.2.2, the introductory paragraph is replaced by the following:

If BSE and atypical scrapie are excluded in accordance with the laboratory methods and protocols set out in Annex X, Chapter C, Part 3, point 3.2, the holding shall be subject to the conditions set out in point (a). In addition, pursuant to the decision of the Member State responsible for the holding, the holding shall be subject to the conditions of either option 1 set out in point (b), or option 2 set out in point (c), or option 3 set out in point (d). In case of a holding with a mixed ovine and caprine flock, the Member State responsible for the holding may decide to apply the conditions of one of the options to the ovine animals of the holding and a different option to the caprine animals of the holding.;
 - (b) in point 2.2.2, the penultimate paragraph of point (b) is replaced by the following:

Movement of animals mentioned in points (i) and (ii) from the holding to the slaughterhouse shall be allowed.;
 - (c) in point 2.2.2, point (c) is replaced by the following:
 - (c) Option 2 – killing and complete destruction of the susceptible animals only

The prion protein genotyping of all ovine and caprine animals present in the holding, except lambs and kids less than three months old provided that they are slaughtered for human consumption not later than when they are three months of age.

Killing and complete destruction, without delay, of all ovine and/or caprine animals, embryos and ova identified by the inquiry referred to in the second and third indents of point 1(b), with the exception of:

Changes to legislation: There are currently no known outstanding effects for the Commission Regulation (EU) 2020/772. (See end of Document for details)

- breeding rams of the ARR/ARR genotype,
- breeding ewes carrying at least one ARR allele and no VRQ allele and, where such breeding ewes are pregnant at the time of the inquiry, the lambs subsequently born, if their genotype meets the requirements of this subparagraph,
- ovine animals carrying at least one ARR allele which are intended solely for human consumption,
- caprine animals carrying at least one of the following alleles: K222, D146 and S146,
- if the Member State responsible for the holding so decides, lambs and kids less than three months old provided that they are slaughtered for human consumption not later than when they are three months of age.

The animals over 18 months of age killed for destruction, shall be tested for the presence of TSE in accordance with the laboratory methods and protocols set out in Annex X, Chapter C, Part 3, point 3.2, as laid down in Annex III, Chapter A, Part II, point 5.

By way of derogation from the conditions set out in the first and second paragraph of option 2, Member States may decide instead to carry out the measures listed in (i), (ii) or (iii):

- (i) to replace the killing and complete destruction of the animals referred to in the second paragraph of option 2 by their slaughtering for human consumption, provided that:
 - the animals are slaughtered for human consumption within the territory of the Member State responsible for the holding,
 - all animals over 18 months of age slaughtered for human consumption shall be tested for the presence of TSE in accordance with the laboratory methods and protocols set out in Annex X, Chapter C, Part 3, point 3.2;
- (ii) to delay the genotyping and subsequent killing and complete destruction or slaughtering for human consumption of the animals referred to in the second paragraph of option 2, for a period not exceeding three months. This derogation can be applied in situations where the index case is confirmed close to the commencement of the lambing and/or kidding season, provided that the ewes and/or goats and their new-born are kept isolated from ovine and/or caprine animals of other holdings during the whole period;
- (iii) to delay the killing and complete destruction or slaughtering for human consumption of the animals referred to in the second paragraph of option 2 for a maximum period of three years from the date of

Changes to legislation: There are currently no known outstanding effects for the Commission Regulation (EU) 2020/772. (See end of Document for details)

confirmation of the index case, in ovine or caprine flocks and holdings where ovine and caprine animals are kept together. The application of the derogation set out in the present paragraph shall be limited to cases where the Member State responsible for the holding considers that the epidemiological situation cannot be handled without killing the relevant animals, but that this cannot be carried out immediately due to the low level of resistance in the ovine and caprine population of the holding, coupled with other considerations, including economic factors. Breeding rams other than those of the ARR/ARR genotype shall be killed or castrated without delay. All possible measures to quickly build up genetic resistance in the ovine and/or caprine population of the holding shall be implemented, including reasoned breeding and culling of ewes to increase the frequency of the ARR allele and eliminate the VRQ allele, and the breeding of bucks carrying the K222, D146 or S146 alleles. The Member State responsible for the holding shall ensure that the number of animals to be killed at the end of the period of delay is not greater than immediately after the index case was confirmed. In the case of the application of the derogation set out in the present paragraph, the measures set out in point 4 shall apply to the holding until the complete destruction or slaughtering for human consumption of the animals referred to in the second paragraph of option 2, after which the restrictions laid down in point 3 shall be applicable.

Following the killing and complete destruction or slaughtering for human consumption of the animals referred to in the second paragraph of option 2, the conditions set out in point 3 shall apply to the holding.;

(d) in point 2.2.2, point (d) is replaced by the following:

(d) Option 3 – no mandatory killing and complete destruction of animals

A Member State may decide not to kill and completely destroy the animals identified by the inquiry referred to in the second and third indents of point 1(b) where the criteria laid down in at least one of the following four indents are met:

- it is difficult to obtain replacement male ovine animals of the ARR/ARR genotype and female ovine animals carrying at least one ARR allele and no VRQ allele, or caprine animals carrying at least one of the following alleles: K222, D146 and S146,
- the frequency of the ARR allele within the ovine breed or holding or the K222, D146 or S146 alleles within the caprine breed or holding is low,
- it is deemed necessary in order to avoid inbreeding,

Changes to legislation: There are currently no known outstanding effects for the Commission Regulation (EU) 2020/772. (See end of Document for details)

- it is deemed necessary by the Member State based on a reasoned consideration of all the epidemiological factors.

The prion protein genotype of all ovine and caprine animals, up to a maximum of 50 of each species, shall be determined within a period of three months from the date of confirmation of the index case of classical scrapie.

When additional classical scrapie cases are detected in a holding where option 3 is being applied, the relevance of the reasons and criteria founding the decision to apply option 3 to this holding shall be reassessed by the Member State. If it is concluded that applying option 3 does not ensure a proper control of the outbreak, the Member State shall switch the management of this holding from option 3 to either option 1 or option 2 as laid down in points (b) and (c).

The conditions set out in point 4 shall immediately apply to a holding where it has been decided to apply option 3.

The Member States allowing recourse to option 3 in the management of classical scrapie outbreaks shall keep records of the reasons and criteria founding each individual application decision.;

- (e) point 3 is replaced by the following:
3. Following the killing and complete destruction or slaughtering for human consumption of all animals identified in a holding in accordance with point 2.2.1, point 2.2.2(b) or point 2.2.2(c), the following restrictions shall apply:
 - 3.1. The holding shall be subject to an intensified TSE monitoring protocol. This shall include the testing for the presence of TSE in animals over the age of 18 months, which have died or have been killed in the holding but not in the framework of a disease eradication campaign. Ovine animals of the ARR/ARR genotype and caprine animals carrying at least one of the K222, D146 or S146 alleles are exempt. Testing shall be carried out in accordance with the laboratory methods and protocols set out in Annex X, Chapter C, Part 3, point 3.2.
 - 3.2. Only the following animals may be introduced to the holding:
 - male ovine animals of the ARR/ARR genotype,
 - female ovine animals carrying at least one ARR allele and no VRQ allele,
 - caprine animals provided that a cleaning and disinfection of all animal housing on the premises has been carried out following destocking.
 - 3.3. Only the following breeding rams, breeding bucks and ovine and caprine germinal products may be used in the holding:
 - male ovine animals of the ARR/ARR genotype,
 - semen from rams of the ARR/ARR genotype,
 - embryos carrying at least one ARR allele and no VRQ allele,

Changes to legislation: There are currently no known outstanding effects for the Commission Regulation (EU) 2020/772. (See end of Document for details)

- breeding bucks and caprine germinal products as defined in the measures decided by the Member State to build up genetic resistance in the caprine population of the holding.
- 3.4. Movements of animals from the holding shall either be allowed for the purposes of destruction or shall be subject to the following conditions:
- (a) the following animals may be moved from the holding for all purposes, including breeding:
 - ARR/ARR ovine animals,
 - ewes carrying one ARR allele and no VRQ allele, provided that they are moved to other holdings which are restricted following the application of measures in accordance with points 2.2.2(b) (option 1), 2.2.2(c) (option 2), or 2.2.2(d) (option 3),
 - caprine animals carrying at least one of the following alleles: K222, D146 and S146,
 - caprine animals provided that they are moved to other holdings which are restricted following the application of measures in accordance with points 2.2.2(b) (option 1), 2.2.2(c) (option 2) or 2.2.2(d) (option 3);
 - (b) the following animals may be moved from the holding to go directly for slaughter for human consumption:
 - ovine animals carrying at least one ARR allele,
 - caprine animals,
 - if the Member State so decides, lambs and kids less than three months old on the date of slaughter,
 - all animals when the Member State has decided to apply the derogations laid down in points 2.2.2(b)(i) and 2.2.2(c)(i);
 - (c) if the Member State so decides, lambs and kids may be moved to one other holding located within its territory solely for the purposes of fattening prior to slaughter subject to compliance with the following conditions:
 - the holding of destination does not contain any ovine or caprine animals other than those being fattened prior to slaughter,
 - at the end of the fattening period, the lambs and kids originating from the holdings subject to the eradication measures shall be transported directly to a slaughterhouse located within the territory of the same Member State to be slaughtered not later than when they are 12 months of age.

Changes to legislation: There are currently no known outstanding effects for the Commission Regulation (EU) 2020/772. (See end of Document for details)

- 3.5. The restrictions set out in points 3.1 to 3.4 shall continue to apply to the holding:
- (a) until the date of attainment of ARR/ARR status by all ovine animals in the holding, provided that no caprine animals are kept on the holding; or
 - (b) until the date all caprine animals on the holding carry at least one of the K222, D146 or S146 alleles, provided that no ovine animals are kept on the holding; or
 - (c) until the date of attainment of ARR/ARR status by all ovine animals on the holding and all caprine animals on the holding carry at least one of the K222, D146 or S146 alleles; or
 - (d) for a period of two years from the date when all the measures referred to in point 2.2.1, point 2.2.2(b), or point 2.2.2(c) have been completed, provided that no TSE case other than atypical scrapie is detected during this two-year period. If a case of atypical scrapie is confirmed during this two-year period the holding shall also be subject to the measures referred to in point 2.2.3.;
- (f) point 4 is replaced by the following:
4. Following the decision to implement option 3 laid down in point 2.2.2(d) or the derogation provided for in point 2.2.2(c)(iii) the following measures shall immediately apply to the holding:
- 4.1. The holding shall be subject to an intensified TSE monitoring protocol. This shall include the testing for the presence of TSE in animals over the age of 18 months which:
- have been slaughtered for human consumption,
 - have died or been killed on the holding but not in the framework of a disease eradication campaign.
- Ovine animals of the ARR/ARR genotype and caprine animals carrying at least one of the K222, D146 or S146 alleles are exempt. Testing shall be carried out in accordance with the laboratory methods and protocols set out in Annex X, Chapter C, Part 3, point 3.2.
- 4.2. The conditions set out in points 3.2 and 3.3 shall apply.
- However, by way of derogation from points 3.2 and 3.3, a Member State may allow the introduction and use in the holding of
- male ovine animals and their semen carrying at least one ARR allele and no VRQ allele including for breeding,
 - female ovine animals carrying no VRQ allele,
 - embryos carrying no VRQ allele,
- subject to compliance with the following conditions:
- the breed of the animal kept on the holding is an endangered breed,

Changes to legislation: There are currently no known outstanding effects for the Commission Regulation (EU) 2020/772. (See end of Document for details)

- the breed of the animal kept on the holding is subject to a breeding programme aiming at the preservation of the breed carried out by a breed society as defined in Article 2(5) of Regulation (EU) 2016/1012 or a competent authority in accordance with Article 38 of that Regulation, and
 - the frequency of the ARR allele within that breed is low.
- 4.3. Movement of animals from the holding shall be allowed for the purposes of destruction or to go directly for slaughter for human consumption or shall be subject to the following conditions:
- (a) rams and ewes of the ARR/ARR genotype and caprine animals carrying at least one of the K222, D146 or S146 alleles, may be moved from the holding for all purposes, including breeding, provided that they are moved to other holdings which are subject to the application of measures in accordance with points 2.2.2(c) (option 2) or 2.2.2(d) (option 3);
 - (b) if the Member State so decides, lambs and kids may be moved to one other holding located within its territory solely for the purposes of fattening prior to slaughter subject to compliance with the following conditions:
 - the holding of destination does not contain any ovine or caprine animals other than those being fattened prior to slaughter,
 - at the end of the fattening period, the lambs and kids shall be transported directly to a slaughterhouse located within the territory of the same Member State to be slaughtered not later than when they are 12 months of age.
- 4.4. The Member State shall ensure that no semen, embryo and ova are dispatched from the holding.
- 4.5. Common grazing of all ovine and caprine animals in the holding with ovine and caprine animals of other holdings shall be prohibited during the lambing and/or kidding period.
- Outside of the lambing and/or kidding period, common grazing shall be subject to restrictions to be determined by the Member State, based on a reasoned consideration of all the epidemiological factors.
- 4.6. The restrictions set out in points 4.1 to 4.5 shall apply for a period of two years following the detection of the last TSE case, other than atypical scrapie, on the holdings where option 3 laid down in point 2.2.2(d) has been implemented. If a case of atypical scrapie is confirmed during this two-year period the holding shall also be subject to the measures referred to in point 2.2.3.;
- (3) in Annex VIII, point 4.1 of Section A of Chapter A is amended as follows:
- (a) in point (a), point (iii) is replaced by the following:

Changes to legislation: There are currently no known outstanding effects for the Commission Regulation (EU) 2020/772. (See end of Document for details)

- (iii) in the case of ovine animals, be of the ARR/ARR prion protein genotype and in the case of caprine animals, carry at least one of the K222, D146 or S146 alleles, provided they do not come from a holding subject to the restrictions set out in Annex VII, Chapter B, points 3 and 4.;
- (b) in point (b), point (iii) is replaced by the following:
 - (iii) in the case of ovine animals, be of the ARR/ARR prion protein genotype and in the case of caprine animals, carry at least one of the K222, D146 or S146 alleles, provided they do not come from a holding subject to the restrictions set out in Annex VII, Chapter B, points 3 and 4.;
- (c) in point (d), points (i), (ii) and (iii) are replaced by the following:
 - (i) the breed of the animals is an endangered breed;
 - (ii) the animals are entered in a breeding book for that breed in the Member State of dispatch. This breeding book is established and maintained by a breed society, recognised in accordance with Article 4(3) of Regulation (EU) 2016/1012, or by a competent authority of that Member State, in accordance with Article 38 of that Regulation. The animals are also to be entered in a breeding book for that breed in the Member State of destination. This breeding book is also established and maintained by a breed society, recognised in accordance with Article 4(3) of Regulation (EU) 2016/1012, or by a competent authority of that Member State in accordance with Article 38 of that Regulation;
 - (iii) in the Member State of dispatch and in the Member State of destination, the breed societies or competent authorities referred to in point (ii) carry out a breeding programme aimed at the preservation of that breed.;
- (d) in point (d), the first and second paragraphs of point (v) are replaced by the following:

following the entry of the animals not fulfilling the requirements set out in points (a) or (b) into the recipient holding in the Member State of destination, the movement of all ovine and caprine animals in that holding shall be restricted in accordance with point 3.4 of Chapter B of Annex VII, for a period of three years. When the Member State of destination has negligible risk of classical scrapie or has an approved national scrapie control programme this restriction shall be maintained for a period of seven years.

By way of derogation from the first paragraph of this point, such restriction on intra-Union trade or to movements of animals within the Member State shall not apply to animals belonging to an endangered breed, which are destined for a holding where this endangered breed is bred. The breed shall be subject to a breeding programme aiming at the preservation of the breed and carried out by a breed society as defined in Article 2(5) of Regulation (EU) 2016/1012 or a competent authority in accordance with Article 38 of that Regulation..
