

SCHEDULE 1

MANNER OF TAKING, MARKING, SEALING AND FASTENING UP OF SAMPLES

PART II

GENERAL INSTRUCTIONS FOR THE TAKING OF SAMPLES

4. When stones are naturally present in a fertiliser, they shall, if possible, be broken up and mixed with the quantity from which a sample is to be drawn. Failing this they shall be removed from the mixture from which a sample is to be drawn and the weight of the residue of that mixture and the weight of the stones ascertained and reported to the analyst. In addition, a representative sample of the stones shall be sent to the analyst with the final sample.
