SCHEDULE 1 Regulations 1(2), 2, 3, 4, 5, 6, 7, 9 and 10(1)

PRESCRIBED DESCRIPTIONS OF MATERIAL, MEANINGS OF NAMES, PARTICULARS AND INFORMATION TO BE CONTAINED IN THE STATUTORY STATEMENT AND LIMITS OF VARIATION

Limits of variation

1. The limits of variation prescribed in this Schedule shall be the permitted deviations of the measured from the declared content of a nutrient, secondary nutrient or trace element, or of the measured from the declared neutralising value, or of the measured from the declared amount of material passing through a specified sieve.

2. Save as prescribed in paragraphs 6, 7 and 8 the limits of variation shall be those set out in the fifth column of the following table.

3. In Section B and Group 2 of Section C of the following table the negative limits of variation specified individually for N, P_2O_5 and K_2O are those permitted for each nutrient taken separately and the limits of variation for the total nutrient content of a fertiliser shall be the sum of the negative deviations from the declared content.

4. No limits of variation shall be permitted in respect of the minimum and maximum contents specified in the third column of the following table, save those prescribed in paragraph 6.

5. Where no maximum limit is specified in the third column of the following table no limits of variation are prescribed as respects an excess of nutrient, neutralising value or amount of material passing through a specified sieve above the declared value or amount, save those prescribed in paragraph 7(b).

6. In the case of materials in Groups 1 to 4 of Section B and Group 2 of Section C of the following table which, not being designated as EEC fertilisers, are sold or offered for sale, and where the declared content of one or more of the nutrients falls below the following levels:—

(i) in the case of nitrogen (N) — 2.5% in an NPK fluid fertiliser solution and 3.5% for all other fertilisers; and

(ii) in the case of phosphorus pentoxide (P_2O_5) and potassium oxide (K_2O) - 3.5% in a fluid fertiliser solution; 4.5% in an NPK fluid fertiliser suspension and 5.5% for all other fertilisers,

the limit of variation for the declared nutrient in such cases shall be that specified in the sixth column of the following table.

7. The limits of variation permitted in respect of the declared content for the forms of nitrogen or the declared solubilities of phosphorus pentoxide shall be as follows:

(a) except as provided in sub-paragraph (b) of this paragraph, the limit of variation shall be one-tenth of the overall content of the nutrient concerned, with a maximum of 2% by weight:

Provided that the overall content of that nutrient remains within:

(i) the levels specified in the third column of the following table save as respects the materials in Groups 1 to 4 of Section B and Group 2 of Section C of the said table which, not being designated as EEC fertilisers, are sold or offered for sale;

(ii) the limits of variation specified in the fifth or, where appropriate, the sixth column of the said table;

(b) in the case of materials in Group 1(c) of Section A and Groups 1, 2, 3, 5 and 6 of Section B and Groups 1(d), 2, 3 and 4 of Section C of the following table which, not being designated as EEC fertilisers, are sold or offered for sale, the limits of variation for ureic nitrogen when declared at 10% and above shall be plus or minus 1.5% by weight and when declared below 10% shall be plus or minus 1.0% by weight.

8. The limits of variation for trace elements and secondary nutrients other than where prescribed in Sections D and E of the following table shall be:

(i) trace elements — up to one-fifth of the declared value for a trace element content not exceeding 2% and 0.4% in absolute terms for a content of more than 2%;

(ii) secondary nutrients in the oxide form - up to a quarter of the declared value for a secondary nutrient content not exceeding 3.6% and 0.9% in absolute terms for a content of more than 3.6%. This is equivalent to the following maxima for the elemental forms—

0.64% maximum for Ca

0.55% maximum for Mg

0.67% maximum for Na

0.36% maximum for S.

SECTION A:

STRAIGHT FERTILISERS

Group	Name of Material	Meaning	Declarations	Limits of variation (absolute value in percentage by weight, except where otherwise specified)
1	2	3	4	5
1(a)	Ammonium nitrate	Chemically obtained product containing ammonium nitrate as its essential ingredient, and possibly fillers such as ground limestone, calcium sulphate, ground dolomite,	Amount of total nitrogen	0.8 (for declarations up to and including 32% N) 0.6 (for declarations exceeding 32% N)

a This is only an indication of how the material should be named and accordingly this form of words should not be used in the statutory statement.

b This is only an indication of how the material should be named and accordingly this form of words should not be used in the statutory statement.

c This is only an indication of how the material should be named and accordingly this form of words should not be used in the statutory statement.

d This is only an indication of how the material should be named and accordingly this form of words should not be used in the statutory statement.

Group	Name of Material	Meaning	Declarations	Limits of variation (absolute value in percentage by weight, except where otherwise specified)
1	2	3	4	5
		magnesium sulphate and kieserite.The nitrogen (N) content must be not less than 20%, and the nitric nitrogen and ammoniacal nitrogen fractions should each account for about half the nitrogen present. If the product is designated as an EEC fertiliser and contains more than 28% by weight of nitrogen (N) it shall have the following additional characteristics (all the percentages specified being by weight): (i) It shall not contain any inorganic additive or inert	Amount of nitric nitrogen Amount of ammoniacal nitrogen	} As set out in paragraph 7(a) of this Schedule

a This is only an indication of how the material should be named and accordingly this form of words should not be used in the statutory statement.

b This is only an indication of how the material should be named and accordingly this form of words should not be used in the statutory statement.

c This is only an indication of how the material should be named and accordingly this form of words should not be used in the statutory statement.

SECTION D:

FERTILISERS CONTAINING BORON, COBALT, COPPER, IRON, MANGANESE, MOLYBDENUM OR ZINC AS TRACE ELEMENTS

Group	*Name of Material*	*Meaning*	*Declaration*	*Limits of variation (absolute value in % by weight, except when stated)*
1	2	3	4	5
1 BORON	Boric acid In addition usual trading name may be given	Product obtained by the action of an acid on a borate and containing not less than 14% boron soluble in water.	Amount of boron soluble in water	0.4
	Sodium borate In addition usual trading name may be given	Product obtained chemically and having as its essential ingredient a sodium borate and containing not less than 10% boron soluble in water.	Amound of boron soluble in water	0.4
	Calcium borate In addition usual trading name may be given	Product obtained partly from colemanite or pandermite having as its essential ingredient calcium borate of which at least 98% will pass through a 0.063 mm sieve. Containing not less than 7% boron.	Amount of total boron	0.4
	Boron ethanol amine	Product obtained from the reaction of boric acid with an ethanol amine and containing not less than 8%	Amount of boron soluble in water	0.4

Group	*Name of Material*	*Meaning*	*Declaration*	*Limits of variation (absolute value in % by weight, except when stated)*
1	2	3	4	5
		boron soluble in water.		
	Borated fertiliser in solution or suspension	Product obtained by dissolution or suspension in water of one or more of the following: boric acid, sodium borante, boron ethanol amine and containing not less than 2% boron soluble in water.	Amount of boron soluble in water	0.4
COBALT	Cobalt salt The designation must include the name of the combined mineral anion	Product obtain chemically and having as its essential ingredient a mineral salt of cobalt and containing not less than 19% cobalt soluble in water.	Amount of cobalt soluble in water	0.4
	Cobalt chelate In addition the nature of the chelating agent should be included	Product obtained by combining cobalt chemically with a chelating agent and containing not less than 2% cobalt soluble in water of which at least 80% has been chelated.	Amount of cobalt soluble in water Amount of chelated cobalt	0.4 0.25
	Solution of cobalt fertiliser In addition the designation must include the name of the mineral	Product obtained by dissolving cobalt salt and/ or cobalt chelate in water and containing not less than 2%	Amount of cobalt soluble in water Amount of chelated cobalt	0.4 0.4

Group	*Name of Material*	*Meaning*	*Declaration*	*Limits of variation (absolute value in % by weight, except when stated)*
1	2	3	4	5
	anion and/or the nature of the chelating agent	cobalt soluble in water.		
COPPER	Copper salt In addition the designation must include the name of the combined anion	Product obtained chemically and having as its essential ingredient a mineral salt of copper and containing not less than 20% copper soluble in water.	Amount of copper soluble in water	0.4
	Copper oxide	Product obtained chemically and having as its essential ingredient copper oxide of which 98% will pass through a 0.063 mm sieve and containing not less than 70% total copper.	Amount of total copper	0.4
	Copper hydroxide	Product obtained chemically and having as its essential ingredient copper hydroxide of which 98% will pass through a 0.063 mm sieve and containing not less than 45% total copper.	Amount of total copper	0.4
	Copper chelate In addition the nature of the chelating	Product obtained by combining copper chemically with a chelating agent and containing	Amount of copper soluble in water Amount of chelated copper	0.4 0.4

Group	*Name of Material*	*Meaning*	*Declaration*	*Limits of variation (absolute value in % by weight, except when stated)*
1	2	3	4	5
	agent should be included	not less than 9% copper soluble in water of which at least 80% has been chelated.		
	Copper-based fertiliser	Product obtained by mixing copper salt, copper oxide, copper hydroxide or copper chelate of which at least 98% will pass through a 0.063 mm sieve and containing not less than 5% total copper.	Amount of total copper	0.4
	In addition the nature of the chelating agent should be included		Amount of copper, soluble in water if this accounts for at least one-quarter of the total copper	
			Amount of chelated copper	
	Copper fertiliser solution	Product obtained by dissolving copper salt and/ or copper chelate and containing not less than 3% copper soluble in water.	Amount of copper soluble in water	0.4
	In addition the nature of the chelating agent should be included		Amount of chelated copper	0.4
IRON	Iron salt	Product obtained chemically and having as its essential ingredient a ferrous salt (Fe II) and containing not less than 12% iron soluble in water.	Amount of iron soluble in water	0.4
	In addition the designation must include the name of the combined anion			
	Iron chelate	Product obtained by combining iron chemically with a chelating agent and containing not less than 5% iron soluble in water of which at least	Amount of iron soluble in water	0.4
	In addition the nature of the chelating agent should be included		Amount of chelated iron	0.4

Group	*Name of Material*	*Meaning*	*Declaration*	*Limits of variation (absolute value in % by weight, except when stated)*
1	2	3	4	5
		80% has been chelated.		
	Iron fertiliser solution In addition the nature of the chelating agent should be included	Product obtained by dissolving iron salt and/or iron chelate in water and containing not less than 2% iron soluble in water.	Amount of iron soluble in water Amount of chelated iron	0.4 0.4
MANGANESE	Manganese salt In addition the designation must include the name of the combined anion	Product obtained chemically and having as its essential ingredient a mineral salt of manganese (II) and containing not less than 17% manganese soluble in water.	Amount of manganese soluble in wter	0.4
	Manganese chelate In addition the nature of the chelating agent should be included	Product obtained by combining manganese chemically with a chelating agent and containing not less than 5% manganese soluble in water of which at least 80% has been chelated.	Amount of manganese soluble in water Amount of chelated manganese	0.4 0.4
	Manganese oxide	Product obtained chemically and having as its essential ingredients manganese oxides of which at least 80% will pass through a 0.063 mm sieve and containing not	Amount of total manganese	0.4

Group	*Name of Material*	*Meaning*	*Declaration*	*Limits of variation (absolute value in % by weight, except when stated)*
1	2	3	4	5
		less than 40% total manganese.		
	Manganese-based fertiliser	Product obtained by mixing manganese salt and manganese oxide and containing not less than 17% total manganese.	Amount of total manganese Amount of manganese soluble in water if this accounts for at least one-quarter of the total manganese	0.4
	Fertiliser in manganese based solution In addition the nature of the chelating agent should be included	Product obtained by dissolving manganese salt and/or manganese chelate in water and containing not less than 3% manganese soluble in water.	Amount of manganese soluble in water Amount of chelated manganese	0.4 0.4
MOLYBDENUM	Sodium molybdate	Product obtained chemically and having as its essential ingredient sodium mobybdate and containing not less than 35% molybdenum soluble in water.	Amount of molybdenum soluble in water	0.4
	Ammonium molybdate	Product obtained chemically and having as its essential ingredient ammonium molybdate and containing not less than 50% molybdenum soluble in water.	Amount of molybdenum soluble in water	0.4

Group	*Name of Material*	*Meaning*	*Declaration*	*Limits of variation (absolute value in % by weight, except when stated)*
1	2	3	4	5
	Molybdenum-based fertiliser	Product obtained by mixing sodium molybdate and ammonium molybdate and containing not less than 35% molybdenum soluble in water.	Amount of molybdenum soluble in water	0.4
	Molybdenum fertiliser in solution	Product obtained by dissolving sodium molybdate and or ammonium molybdate in water and 5% molybdenum soluble in water.	Amount of molybdenum soluble in water	0.4
ZINC	Zinc salt In addition th designation must include the name of the combined anion	Product obtained chemically and having as its essential ingredient a mineral salt of zinc and containing not less than 15% zinc soluble in water.	Amount of zinc soluble in water	0.4
	Zinc chelate In addition the nature of the chelating agent should be included	Product obtained by combining zinc chemically with a chelating agent and containing not less than 5% zinc soluble in water.	Amount of zinc soluble in water Amount of chelated zinc	0.4 0.4
	Zinc oxide	Product obtained chemically and having as its essential ingredient zinc oxide and	Amount of total zinc	0.4

Group	*Name of Material*	*Meaning*	*Declaration*	*Limits of variation (absolute value in % by weight, except when stated)*
1	2	3	4	5
		containing not less than 70% total zinc.		
	Zinc based fertiliser	Product derived from zinc salt and zinc chelate containing not less than 30% total zinc.	Amount of total zinc Amount of zinc soluble in water if this accounts for at least one-quarter of the total zinc	0.4
	Zinc based solution In addition the nature of the chelating agent should be included	Product obtained by dissolving zinc salt and/or zinc chelae in water. Contains not less than 3% zinc soluble in water.	Amount of zinc soluble in water Amount of chelated zinc	0.4 0.4
2	Mixture of trace elements	Product of two or more of the products listed in (1) above. Contains not less than 5% of trace elements when a solid and 2% when a liquid. Contains not less than this following for each trace element declared: **Boron** 0.2 0.2	Amount of total trace element Amount of trace element soluble in water, where this accounts for at least one half of the total content Amount of chelated trace element	0.4

Group	*Name of Material*	*Meaning*	*Declaration*	*Limits of variation (absolute value in % by weight, except when stated)*
1	2	3	4	5
		exclusive of mineral complexed percentage weight of fertiliser		
		Cobalt 0.02 0.02		
		Copper 0.5 0.1		
		Iron 2.0 0.3		
		Manganese 0.5 0.1		
		Molybdenum 0.02 —		
		Zinc 0.5 0.1		

SECTION E:

FERTILISERS CONTAINING MAINLY CALCIUM, MAGNESIUM OR SULPHUR AS NUTRIENTS

Group	*Name of Material*	*Meaning*	*Declarations*	*Limits of variation (absolute value in percentage by weight, except where stated)*
1	2	3	4	5
	Calcium sulphate In addition usual trading names may be given	Product of natural or industrial origin containing as its essential ingredient calcium sulphate at various degrees of hydration, containing by weight: 1. Not less than 25% calcium oxide 2. Not less than 35%	Amount of total sulphur trioxide *Optional declaration* Amount of calcium oxide	0.9 0.9

Group	*Name of Material*	*Meaning*	*Declarations*	*Limits of variation (absolute value in percentage by weight, except where stated)*
1	2	3	4	5
		sulphur trioxide Calcium and sulphur are expressed as total calcium oxide and sulphur trioxide. Not less than 80% of the calcium sulphate should be able to pass through a 2 mm sieve. Not less than 99% of the calcium sulphate should be able to pass through a 10 mm sieve.		
	Calcium chloride solution	Calcium chloride solution of industrial origin, containing not less than 12% calcium oxide.	Amount of calcium oxide	0.9
		Calcium is expressed as calcium oxide soluble in water.	*Optional declaration* for plant spraying	
	Elemental sulphur	Comparatively refined natural or industrial product containing not less than 98% sulphur (245% sulphur trioxide). Sulphur is expressed as total sulphur trioxide.	Amount of total sulphur trioxide	0.9

Group	*Name of Material*	*Meaning*	*Declarations*	*Limits of variation (absolute value in percentage by weight, except where stated)*
1	2	3	4	5
	Kieserite In addition usual trading names may be given	Product of mineral origin containing monohydrated magnesium sulphate as its main component, containing by weight: 1. Not less than 24% magnesium oxide 2. Not less than 45% sulphur trioxide Magnesium and sulphur expressed as magnesium oxide soluble in water and sulphur trioxide soluble in water.	Amount of magnesium oxide soluble in water *Optional declaration* Amount of sulphur trioxide soluble in water	0.9 0.9
	Magnesium sulphate In addition usual trading names may be given	Product containing heptahydrated magnesium sulphate as its main component and containing by weight: 1. Not less than 15% magnesium oxide 2. Not less than 28% sulphur trioxide Magnesium and sulphur are expressed	Amount of magnesium oxide soluble in water *Optional declaration* Amount of sulphur trioxide soluble in water	0.9 0.9

Group	*Name of Material*	*Meaning*	*Declarations*	*Limits of variation (absolute value in percentage by weight, except where stated)*
1	2	3	4	5
		as magnesium oxide soluble in water and sulphur trioxide.		
	Magnesium chloride solution	Product obtained by dissolving magnesium chloride of industrial origin and containing by weight: 1. Not less than 13% magnesium oxide 2. Not more than 3% calcium oxide	Amount of magnesium oxide	0.9
