

SCHEDULE 5

SAMPLING

Moisture sample

32. Primary samples of seed for moisture tests shall be drawn in such a way as to minimise exposure to the atmosphere. The composite moisture sample so collected may, if his licence permits it, be tested by a licensed seed sampler but shall in any other case be submitted intact to the testing station in an airtight container. It shall not be passed through a seed divider. Seed for moisture tests shall be kept separate from seed on which other determinations are to be made.
