

SCHEDULE 2

Testing Methods

PART 1

METHOD FOR THE ISOLATION OF *CLOSTRIDIUM PERFRINGENS*

Samples with colonies of *Clostridium perfringens*

5. After incubation, each set of duplicate plates shall be examined for colonies characteristic of *Clostridium perfringens* (black). The sample provisionally fails if any colonies characteristic of *Clostridium perfringens* are present, in which case the following procedure shall be followed to establish whether or not the colonies are *Clostridium perfringens*.
