

## SCHEDULE

Regulation 10

### INSERTION OF SCHEDULE 4B INTO THE FODDER PLANT SEED (SCOTLAND) REGULATIONS 2005

#### “SCHEDULE 4B

Regulation 8A(4)

#### Requirements for preservation mixtures

### PART I

#### Conditions for directly harvested preservation mixtures

1. The percentage of the constituents of the mixture that are species and, where relevant, subspecies, typical for the habitat type of the collection site is adequate for the purpose of recreating the habitat type of the collection site.
2. The germination rate of the constituent in paragraph 1 is sufficient for the purpose of recreating the habitat type of the collection site.
3. The maximum content of species which do not comply with paragraph 1 does not exceed 1% of the weight of a submitted sample.
4. The mixture does not contain *Avena fatua*, *Avena sterilis* or *Cuscuta spp.*.
5. The maximum content of *Rumex spp.*, other than *Rumex acetosella* and *Rumex maritimus*, does not exceed 0.05% of the weight of a submitted sample.

### PART II

#### Conditions for crop-grown preservation mixtures

1. The constituents are species which are typical for the habitat type of the collection site and, as constituents of the mixture, important for the preservation of the natural environment in the context of conservation of genetic resources.
2. Each constituent of the mixture has been multiplied for no more than five generations.

### PART III

#### Examinations

1. All visual inspections and examinations used to ascertain whether a preservation mixture meets the conditions specified in these Regulations must be carried out in accordance with current international methods insofar as such methods exist.”
