Information to be reported in relation to the prevention, control and reduction of parasites on fish farms
1.-(1) The average number of adult female (gravid and non-gravid) Lepeophtheirus salmonis counted per fish per site in the reporting week, to be calculated by applying the following formula-
$\frac{A}{B}$
where-
(a) $\mathrm{A}=$ the total number of adult female (gravid and non-gravid) Lepeophtheirus salmonis counted on sampled fish in a site in the reporting week,
(b) $\quad \mathrm{B}=$ the number of fish sampled in that site in that reporting week.
(2) In the event that a count of adult female (gravid and non-gravid) Lepeophtheirus salmonis is not conducted in a reporting week, the reason for not conducting the count.
(3) Where the reason provided under sub-paragraph (2) is that the site is fallow, no information is required to be provided in respect of that site until such time as the site ceases to be fallow.
