

## SCHEDULE

### PART 2

#### Direct biophysical effects of exposure

##### Exposure limit values – thermal effects

#### Notes

2. The ELV may be exceeded during an employee’s shift where the employer ensures that—
  - (a) it is only exceeded temporarily;
  - (b) adequate information is provided to the employee on the possibility of sensory effects related to pulsed microwave radiation, including auditory sensations; and
  - (c) where any of those sensory effects are reported to the employer, the risk assessment is updated where necessary.

**Table ELV6 – Health effect ELV for exposure to electromagnetic fields from 6 to 300 GHz**

<i>Frequency range</i>	<i>Health effect ELV – power density (S) [Wm<sup>-2</sup>]</i>
6 GHz ≤ f ≤ 300GHz	50
