

## SCHEDULE 5

### Location of sampling points

## **PART 2**

### Macroscale siting for Group B pollutants

**8.** Sampling points should in general be sited so as to avoid measuring very small micro-environments in their immediate vicinity. As a guideline, a sampling point should be representative of air quality in surrounding areas of no less than 200 m<sup>2</sup> at traffic-orientated sites, at least 250 m × 250 m at industrial sites, where feasible, and several square kilometres at urban-background sites.
